Rate Base and Test Period

Alabama Public Service Commission

Alabama statutes permit the use of a historical test year, adjusted for known-and-measurable changes, in traditional rate cases. Since the implementation of the RSE framework for ratemaking, however, full rate case proceedings have not occurred. A cash return on construction work in progress, or CWIP, has not been permitted in Alabama. Instead, CWIP is included in rate base, with a corresponding inclusion in income of noncash allowance for funds used during construction. Alabama Power utilizes a Certificated New Plant mechanism, under which rates are adjusted, subject to PSC review, shortly after new capacity comes online (see the Alternative regulation section). (Section updated 7/3/18)

Arizona Corporation Commission

The ACC utilizes an end-of-test-year fair-value rate base, which is generally determined by an equal weighting of net original cost and "reconstruction cost new." The authorized fair-value return is based upon the return required to recover the overall cost of capital as approved by the Commission. In rate cases, the utilities also provide an historical rate base and the traditionally calculated rate of return, the product of which, historically, had been equal to the product of the fair-value rate base and the authorized fair-value return; however, in recent cases, the ACC has authorized "premium returns" on fair-value rate bases.

The ACC has traditionally utilized historical test periods that are quite stale by the time of decision. However, certain known-and-measurable changes are considered. In some instances, the ACC has accepted known and measurable adjustments to rate base that were placed into service up to 15 months after the conclusion of the test period.

The ACC has not permitted utilities to earn a cash return on construction work in progress. (Section updated 7/27/18)

Arkansas Public Service Commission

In general rate case proceedings, the PSC relied on a year-end original-cost rate base that included either a fully historical test period or a test period consisting of six months of actual and six months of projected data. The commission considers "known-and-measurable" changes to expense and rate base items occurring within 12 months following the end of the test period. However, legislation enacted in March 2015 that established a formula rate plan, or FRP, framework requires any utility seeking to operate under an FRP to select either an historical or a fully projected test year for all annual filings under the plan (see the Alternative Regulation section).

The state's utilities are not prohibited from requesting approval to earn a cash return on construction work in progress, or CWIP; however, the PSC has not historically allowed a return on CWIP for any facilities. (Section updated 11/4/16)

California Public Utilities Commission

The PUC generally relies on an average original-cost rate base and a test period that is fully-forecasted when the new rates become effective. Working capital and construction-work-in-progress, or CWIP, are not included in rate base. However, the PUC allows for a cash return on working capital and may also authorize, on a case-by-case basis, a cash return on a portion, typically 50%, of a utility's electric and gas CWIP through adders that are incorporated into the return on rate base.

State law permits a utility that is proposing to purchase or construct an electric generating facility to apply to the PUC for an order specifying, in advance, the rate treatment, including a cost cap estimate and the equity return, that will apply to the plant over its economic life (see the Integrated Resource Planning section). (Section updated 10/4/17)

Colorado Public Utilities Commission

Historically, the PUC relied upon year end original cost rate bases for energy utilities. However, recent energy cases have utilized average rate bases. While the use of test years containing projected data is permitted by law, forecasted test years have not been permitted outside of settled rate cases.

The PUC has allowed utilities to earn a cash return on construction work in progress, or CWIP, related to generation facilities on a plant specific basis. In addition, state statutes permit the PUC to authorize a utility to earn a cash return on CWIP related to transmission facilities. (Section updated 7/7/16)

Connecticut Public Utilities Regulatory Authority

The PURA has generally relied on a year-end original-cost rate base for a historical test period, with adjustments to rate base, revenues, expenses and capitalization to reflect conditions at the midpoint of the rate year. By law, the PURA is prohibited from allowing a cash return on construction work in progress. (Section updated 2/8/18)

Delaware Public Service Commission

The PSC generally relies on an average original-cost rate base for a historical test period. Known and measurable adjustments to test-period data are permitted. Historically, the PSC has considered the inclusion in rate base of construction work in progress, or CWIP, on a case-by-case basis and has permitted Delmarva Power & Light Co. to include in rate base CWIP related to pollution-control investment. (Section updated 9/13/18)

District of Columbia Public Service Commission

The PSC generally relies on an average original-cost rate base, and has allowed filings to be submitted based upon partially-forecasted data. Historically, the PSC has permitted the inclusion of construction-work-in-progress, or CWIP, in rate base only for pollution-control facilities and in some instances for projects that came on line during the course of the case, but outside the test year. In a 2011 rate case filing Potomac Electric Power requested that the PSC adopt a rule to allow the use of fully forecasted test years in rate cases. In its 2012 order in the proceeding, the PSC declined to consider Pepco's request, stating that the proposal was "inconsistent with the Commission's prior practice."

In Pepco's most recent electric rate case decided in July 2017, the PSC approved Pepco's request to submit a " multi-year rate plan in the next rate case if Pepco believes that this should be considered in an environment of growing distributed energy sources, or DERs." Additionally, in the final order, the commission stated that it "is not averse to allowing Pepco to include in its next rate case a request for a fully forecasted test year and or a multi-year rate proposal, in addition to a traditional test year filing, subject to several conditions." (Section updated 12/13/17)

Florida Public Service Commission

The PSC generally relies on an average original cost rate base. Court rulings prohibit the commission from using a year-end rate base in a permanent rate case, absent a showing of extraordinary growth; however, the PSC may do so in an interim proceeding. In permanent base rate case decisions, the PSC generally utilizes test periods that are fully or partially forecast at the time the rate decisions are issued.

The utilities may be authorized a cash return on construction work in progress for any new nuclear or integrated gasification combined cycle facilities, for upgrades to existing facilities that result in increased capacity, and for new, enlarged, or relocated electric transmission lines or facilities that are necessary to serve these power plants. All construction work in progress for minor projects — less than a year in construction and less than 0.5% of the utility's gross plant balance — are included in rate base. All construction work in progress for major projects accrues allowance for funds used during construction until placed into service. (Section updated 09/17/18)

Georgia Public Service Commission

By statute, electric and natural gas companies file rate cases based on projected data, and the PSC relies on average rate bases. Electric and natural gas rate case test years must be partially forecasted at the time of decision.

Historically, a cash return on construction work in progress, or CWIP, has only been permitted on a very limited basis. In 2009, the PSC approved Georgia Power's request to earn a cash return on CWIP for two proposed 1,100-MW nuclear units, Vogtle Units 3 and 4. Legislation was subsequently enacted in 2009 authorizing Georgia utilities to earn a cash return on CWIP associated with planned nuclear plants that have been certified by the PSC (see the Adjustment Clauses section). (Section updated 12/19/16)

Hawaii Public Utilities Commission

The PUC relies on an average original cost rate base valuation. Rate cases are filed based on forecasted test periods, but by the time interim rates are implemented, the test periods are partially historical. PUC rules provide for rate requests that are filed between January and June to be based on a 12-month period ending June 30 of the following year, and applications filed between July and December to be based upon a test year ending December 31 of the following year. A cash return on

construction work in progress has not been authorized by the PUC. (Section updated 8/17/16)

Idaho Public Utilities Commission

The PUC has historically relied upon an average original-cost rate base for a historical test period (adjusted for known-and-measurable changes); however, major plant additions have been accorded year-end rate base treatment. For Idaho Power, or IP, the PUC has, on occasion, utilized a partially forecasted test period.

State law prohibits the PUC from allowing a cash return on construction-work-in-progress, or CWIP, "except upon its explicit finding that the public interest will be served." (Section updated 12/21/16)

Illinois Commerce Commission

For utilities that are not subject to formula rate plans, or FRPs, statutes permit rate filings to be based on historical or future test years; however, an average rate base must be used if a future test year is selected.

For utilities under FRPs, filings must be based on a historical test year, reflecting estimated net plant additions through the end of the year in which the case is filed. "Reconciliation" adjustments are made to account for differences between the company's revenue requirement in effect during a given year and what it would have been had actual cost data been available at the time those rates were established.

By law, the ICC, at its discretion, may include construction work in progress in rate base for projects that will be completed within 12 months of the date of the rate determination, and for certain pollution-control facilities. (Section updated 10/2/18)

Indiana Utility Regulatory Commission

Although Indiana is statutorily a "fair-value" rate base state, the URC has, in most instances, calculated its fair-value rate base and return findings after having determined a return on original-cost rate base. Rate cases have generally been decided on the basis of an historical test period and a test-year-end rate base, with adjustments for known-and-measurable changes expected to occur within one year after the end of the test period.

State law permits the utilities to elect to utilize, in the context of a rate case under the purview of the URC, a historical test year, a forward-looking test year, or a "hybrid" test year that includes both historic and projected data. In most instances the companies have filed for, and the URC has utilized, test periods that were historical at filing, but reflected adjustments for known and measurable changes beyond the test period.

Historically, construction work in progress, or CWIP, was not included in rate base for a cash return, except when related to qualified pollution control equipment; however, in 2007, the URC permitted CWIP treatment for Duke subsidiary Duke Energy Indiana's Edwardsport integrated gasification combined-cycle plant. URC rules require that a utility file for rate base inclusion of pollution-control-related CWIP no earlier than six months after construction of the project has commenced. The company may then file as often as every six months for rate recognition of additional CWIP amounts.

State law permits the URC to approve riders to facilitate recovery of the costs associated with certain electric and gas infrastructure expansion projects, including those intended to improve safety or reliability, modernize the utility's system or improve an area's economic development prospects. The riders are to incorporate the utility's CWIP balance for these projects. (Section updated 7/25/18)

Iowa Utilities Board

Historically, the IUB has utilized a 13-month average original-cost rate base for a historical test period. By law, the IUB must consider verifiable data existing as of the date of commencement of the proceedings with respect to known-and-measurable changes in costs not associated with a different level of revenue and known-and-measurable revenues not associated with a different level of costs that are to occur within 12 months after the date of commencement of the proceedings.

State law requires that the IUB specify ratemaking principles — in advance of utility construction — to be applied to new baseload generation facilities of 300 MW or more for combined-cycle plants, alternative energy production facilities and certain investments to significantly alter an existing generation facility. The ratemaking principles apply once the facilities are placed into service and remain in place for the useful life of the facility (see the Alternative regulation section).

(Section updated 10/12/18)

Kansas Corporation Commission

The KCC has generally relied upon a year-end original-cost rate base for a historical test period; however, the commission generally allows updates to plant in service up until about one month prior to the date that the staff files testimony in the case. The KCC is required by statute to authorize the utilities to include in rate base plant-related construction-work-in-progress that is expected to be completed within one year and the investment is for a generation or transmission facility.

Abbreviated base rate proceedings are permitted by state law, and in these cases, the utilities are allowed to seek KCC approval of new rates that reflect investments made since the utility's previous recent base rate proceeding. (Section updated 8/21/18)

Kentucky Public Service Commission

The PSC generally utilizes a year-end rate base for a historical test period, adjusted for known-and-measurable changes. However, statutes permit the utilities to employ a forecasted test period in which a 13-month average rate base is used. The electric utilities have historically been allowed to include virtually all construction work in progress in rate base for a cash return. (Section updated 2/7/18)

Louisiana Public Service Commission

In base rate proceedings, the PSC generally relies on an average net original-cost rate base for a historical test period with limited pro-forma adjustments to account for changes in operations in the year in which rates are expected to be in effect. On occasion, the PSC has permitted construction work in progress, or CWIP, to be included in rate base with an allowance-for-funds-used-during-construction offset.

PSC rules pertaining to the certification of proposed nuclear generation projects provide for such projects to be accorded a cash return on CWIP. For further details, see the Integrated Resource Planning section.

In recent years, the PSC has allowed CWIP treatment for non-nuclear facilities, but has required that CWIP-related revenue requirement flow back to ratepayers once the related facilities achieve commercial operation.

In a 2013 decision for Southwestern Electric Power, or SWEPCO, the PSC adopted a settlement directing the company to implement an estimated \$22.8 million ratepayer credit, representing the first year of a levelized, five-year repayment, with interest, of construction work in progress-related amounts collected by SWEPCO during the construction of the 600-MW, coal-fired Turk plant, which achieved commercial operation in 2012.

In 2006, the PSC authorized Cleco to recover, through its fuel adjustment clause, an amount equivalent to approximately 75% of the Louisiana-jurisdictional carrying charges during the construction period of the 600-MW solid-fuel fired Madison 3 plant, formerly Rodemacher 3, which achieved commercial operation in 2010. Carrying charge recovery was not to exceed 6.5% of the company's projected retail revenues. Following the commercial operation of Madison 3, the PSC directed Cleco to return these collections, \$167.9 million, to ratepayers over a period that concluded in 2013. (Section updated 10/31/16)

Maine Public Utilities Commission

The PUC relies on an average original-cost rate base for an historical test period adjusted for known-and-measurable changes. The commission accepts rate filings based upon partially estimated data, provided that actual data are available in sufficient time to be incorporated into the record. The PUC has, at times, utilized attrition adjustments designed to reflect circumstances anticipated in the first year of new rates. The PUC generally does not permit utilities to earn a cash return on construction work in progress. (Section updated 6/28/17)

Maryland Public Service Commission

The PSC utilizes a historical test year that relies on a 13-month average original-cost rate base. Test-year expenses may be adjusted for known-and -measurable changes. The test periods must be fully historical at the time rate decisions are issued. Filings are usually based on partially forecasted data that are updated to reflect actual data during the course of the proceeding.

With respect to known and measurable changes, the PSC has generally only allowed adjustments to reflect investment placed into service prior to the start of hearings in a rate case. In pending rate case, Potomac Electric Power proposes a two-step increase, designed to allow the company to phase-in infrastructure investments expected to be placed into service through

April 2019.

Maryland does not generally permit construction work in progress, or CWIP, to be included in rate base. However, new investment accrues allowance for funds used during construction. (Section updated 1/5/18)

Massachusetts Department of Public Utilities

In traditional rate cases, a historical test year and a year-end original-cost rate base are utilized, with adjustments for "known-and-measurable" changes. Post test-year rate base additions have been permitted only for "significant" investment that has a "substantial" effect on rate base. Historically, a cash return on construction work in progress has not been allowed. (Section updated 2/22/17)

Michigan Public Service Commission

The PSC has typically relied upon an average original-cost rate base for a test year that is partially forecast at the time a decision is rendered regarding permanent rates. However, as a result of interim rate procedures that were in place prior to the April 20, 2017 effective date of the 2016 legislation (see the Rate Case Timing/Interim Procedures section), new rates typically were effective at or shortly after the beginning of the test year, effectively providing for a fully-forecasted test year. The 2016 legislation permits the use of a fully forecasted test year.

The PSC has generally permitted a cash return on pollution-control construction work in progress, or CWIP. In addition, prior to April 20, 2017, state law provides for a certificate of necessity, or CON, process for significant capital projects, including new and expanded generation facilities that cost more than \$500 million. Under the law, a utility may file an application requesting that the PSC review proposed investments in new generation, acquisition of existing power plants, major upgrades of power plants, and long-term power purchase agreements. Once the PSC issues a CON, the utility would be permitted to earn a cash return on the debt-financed portion of CWIP for the related facilities, and once declared used and useful, earn a return of and on the project costs up to those approved by the commission. If actual costs exceed the approved costs, the utility would be permitted to recover the excess only if the PSC finds the incremental expenditures to be reasonable and prudent.

Effective April 20, 2017 pursuant to the 2016 legislation, the certificate of need process was modified to reduce the dollar threshold from \$500 million to \$100 million and to allow for the inclusion of renewable energy investments. (Section updated 4/7/17)

Minnesota Public Utilities Commission

The PUC generally relies upon an average original-cost rate base for a test year that is partly forecasted at the time a decision regarding permanent rates is issued. However, this use of a partially forecasted test year, in combination with the commission's interim rate policy (see the Rate Case Timing/Interim Procedures section), generally permits a significant part of a requested increase to be in place for the entire 12 month test period. A cash return on construction work in progress, or CWIP, is permitted for mercury emissions reduction projects (see the Emissions section), certain other emissions reduction projects (see the Alternative Regulation section), certain renewable energy projects, and certain transmission projects.

Legislation enacted in 2015 allows utilities to file for multi-year rate plans of up to five years, versus up to three years under previous statutes. Recently, as part of a 2017 rate case settlement, Northern States Power Co. was authorized a four-year rate plan that included three years of increases. (Section updated 5/10/18)

Mississippi Public Service Commission

By law, in a traditional rate case, a utility may propose a rate change using a projected test period beginning with the proposed effective date of the new rates. In the most recently completed major base rate case, decided in 2014, the PSC adopted a test year containing partially projected data and an average rate base for Entergy Mississippi, or EM. The current alternative rate plans, or ARPs, in effect for Mississippi Power, or MP, and EM provide for annual rate reviews, and utilize forward-looking test years and average rate bases.

Historically, a cash return on construction work in progress, or CWIP, for baseload generation was not permitted in Mississippi. However, legislation enacted in 2008 authorizes the PSC to conduct prudence reviews, and issue a prudence determination as frequently as quarterly, regarding the construction costs of an electric generation facility. Any prudence determination would be binding in all future regulatory proceedings involving the utility, unless the generating facility is imprudently abandoned or

cancelled. The PSC may permit rate recovery of all prudently incurred preconstruction, construction, and operating costs of new baseload coal fired generation facilities of at least 300 MW and nuclear facilities of at least 800 MW, including a current cash return on CWIP. Recovery of relevant expenses is permitted, whether or not the facility's construction is commenced or completed.

Regarding baseload generation, on July 6, 2017, the PSC initiated a docket to address, among other things, the "assignment of costs for the commercially operational and nonoperational portions of" MP's construction of an integrated gasification combined cycle, or IGCC, plant known as Kemper. That action followed a June 28, 2017 notification the company tendered to the commission specifying that "it is beginning a process to suspend operations and start-up activities on the gasifier portion of the Kemper IGCC." The proceeding is ongoing.

A cash return on CWIP has been permitted for certain environmental investments and other non-baseload items included in the utilities' ARPs.

The PSC may deem as used and useful an electric utilities' construction or acquisition of facilities that support economic development activity, whether or not such facilities ultimately end up serving end use customers, provided that such facilities have received a certificate of public convenience and necessity or other commission approval after July 1, 2015. Electric utility investments in natural gas reserves that "foster long-term stability in the cost of fuel" are accorded identical treatment. Legislation enacted on March 10, 2017, extends the above noted treatment to gas utilities. (Section updated 10/20/17)

Missouri Public Service Commission

The PSC generally relies on a year-end original-cost rate base, but, by law, must consider fair value. Rate requests are typically filed based on historical or partly forecasted test period data, which are updated during the course of the proceeding to reflect actual results. The adopted test periods are historical at the time of PSC decisions; however, limited "known-and-measurable" changes beyond the end of the test period may be recognized. By law, the PSC is prohibited from including electric construction-work-in-progress in rate base. (Section updated 12/19/17)

Montana Public Service Commission

The PSC generally relies on an average original-cost rate base for a historical test period, adjusted for known-and-measurable changes within 12 months beyond the end of the test period. The PSC does not permit construction work in progress to be included in rate base. (Section updated 2/12/18)

Nebraska Public Service Commission

The gas utilities have generally relied upon year-end original cost rate bases for historical test periods; however, use of a forecasted test year is permitted. In more recent rate cases, the PSC has permitted the utilities to earn a cash return on construction work in progress. (Section updated 5/17/16)

New Hampshire Public Utilities Commission

While in the past the PUC has utilized a 13-month average or a five-quarter average rate base, recent rate cases have utilized a year-end rate base. The commission uses a historical test year, adjusted for known-and-measurable changes. State statutes prohibit the inclusion of construction work in progress in rate base. (Section updated 12/8/17)

New Jersey Board of Public Utilities

The BPU relies upon a test-year-end original-cost rate base for a test period that is fully historical by the time a rate decision is issued. Most cases are filed utilizing partially projected data that is updated to actual data by the end of the case, with certain limited known-and-measurable post-test year changes permitted.

The BPU has generally required that filings contain at least six months of actual data. This premise was recently enforced when on July 26, 2018, the BPU dismissed without prejudice an Atlantic City Electric rate case where the company had filed based on a test year that included three months of actual and nine months of forecasted data. The company re-filed the case using six months of actual and six months of projected date on Aug. 24. The Division of Rate Counsel had requested that the BPU dismiss the rate case, contending that the filing did not comport with the BPU's rate case rules because the test year in the case ended more than six months after the filing date and was "deficient" because the company has provided only three months, rather than the usual six months, of actual data.

The BPU has considered the inclusion of construction work in progress in rate base on a case-by-case basis, and has

approved such treatment only in cases of financial distress. (Section updated 8/27/18)

New Mexico Public Regulation Commission

The PRC historically relied upon a year-end original-cost rate base for a historical test period, adjusted for known-and-measurable changes. However, 2009 legislation allows the PRC to use forecasted test periods. The first rate case that actually reflected a forecasted test year was decided in 2014. However, the case, involving Xcel Energy subsidiary Southwestern Public Service, was decided more than 15 months after the date of filing, and more than four months into the test year, thus reducing the effectiveness of the use of a future test year.

The PRC subsequently rejected two separate utility rate case applications in 2015 that utilized fully forecasted test years. In the same year, the commission issued an interpretive ruling in which the PRC determined that a test year containing projected data must commence within 45 days after a rate case filing. Several utilities subsequently appealed the PRC's interpretive order to the New Mexico Supreme Court. However, while the matter was pending before the Court, the PRC issued an order withdrawing the interpretive ruling. Also, in April 2017, the commission rejected an additional rate case over the use of a future test year.

State law permits utilities to request PRC approval to reflect construction work in progress, or CWIP, in rate base. The Commission may allow such treatment if it finds "that a project's costs are reasonable." (Section updated 5/10/17)

New Orleans City Council

While most cases that have come before the NOCC have contained test years based on historical information, the utilities have sometimes been permitted to use test periods containing partially forecasted data. In addition, the Council has historically relied upon average rate base methodologies; however, in some rate cases, the utilities have been permitted to employ year-end rate base methodologies. Also, the NOCC has, at times, permitted the utilities to earn a cash return on construction work in progress. (Section updated 10/31/16)

New York Public Service Commission

In a traditional rate case, the PSC relies on an average original-cost rate base for a fully forecasted test period. Filings must include operating results for a historical 12-month period ending not more than 150 days prior to the filing date. The company must provide forecasted results for the first 12-month period that the rates will be in effect, plus an appropriate "verifiable link" between the two periods. In the context of adopting multi-year rate plans, the PSC has allowed rate base to be updated each year.

With regard to construction-work-in-progress, or CWIP, in the 1980s, during the nuclear construction cycle, the PSC permitted a cash return on CWIP to the extent a utility's cash flow metrics were projected to be below certain standards. However, now that the regulated utilities, for the most part, no longer own generating facilities, the current construction projects, e.g., distribution facilities, are significantly less costly, and the lead time to commercial operation of these projects is considerably shorter. As a result, the CWIP issue is less of a concern than in the past. (Section updated 8/31/18)

North Carolina Utilities Commission

State law requires the NCUC to utilize a year end, original cost rate base for an historic 12-month test period, and to consider changes that are known and quantifiable prior to the close of hearings. Legislation enacted in 2007 expanded the NCUC's ability to allow a cash return on construction work in progress, or CWIP, in a rate case for new baseload generating facilities by removing statutory language that had permitted utilities to earn a current cash return on CWIP only "to the extent...such inclusion is in the public interest and necessary to the financial stability of the utility in question."

The NCUC may pre-determine the appropriateness of a utility's decision to build a baseload generating facility. The utility may request, or the NCUC may require, an ongoing prudence review of the plant's construction costs. The utility is required to file annual progress reports on actual construction costs and any changes to cost estimates. In the context of a general rate case, the utility would be permitted to recover costs previously found to be prudent in rates following completion of the plant, except under strictly limited circumstances where such costs were subsequently determined to be imprudent based upon evidence that was not reasonably discoverable at the time the initial finding of prudence was made. If plant construction is not completed because of an unavoidable or unforeseen change in circumstances, the utility would be permitted to recover prudently incurred costs. (Section updated 2/2/17)

North Dakota Public Service Commission

Statutes permit a utility filing a rate case to utilize a historical, current or future test period. When selecting either a current or future test year, the utility must present the following: (1) a comparison with a historical period; (2) a statement providing for the reasonableness and reliability of the underlying forecast; and (3) a statement that the accounting methodologies utilized in the forecast are consistent with those that will actually apply. The PSC generally relies upon test periods that are partially or fully forecast at the date of decision. The PSC generally utilizes average "prudent investment" rate base valuations, which, in practice, have been identical to "original cost."

State law permits the electric utilities, through separate rate adjustment mechanisms, to earn a cash return on construction work in progress for investments in transmission infrastructure and for federally mandated environmental compliance projects (see the Adjustment clauses section). (Section updated 10/10/18)

Oklahoma Corporation Commission

The OCC has generally relied on year-end rate bases for historical test periods, adjusted for certain known-and-measurable changes occurring within six months of the end of the test year. Energy companies have been allowed to earn a cash return on construction work in progress, or CWIP, for investment that is to be placed into service within six months of the end of the test period and for replacement of, or improvements to, existing plant. In addition, state statutes permit the OCC to allow CWIP treatment for environmental-compliance and transmission projects, and to pre-approve the ratemaking treatment to be accorded new construction projects (see the Integrated resource planning section). (Section updated 1/3/18)

Oregon Public Utility Commission

The PUC generally relies on an average original cost-rate base and has allowed filings based on partially or fully forecasted test periods. Inclusion of construction work in progress in rate base is prohibited by law. (Section updated 8/4/16)

Pennsylvania Public Utility Commission

Historically, the PUC relied on a depreciated year-end original-cost rate base for a test year that was historical by the time a case was decided. However, legislation enacted in 2012, known as Act 11, allows the PUC to use fully projected test years in general rate cases, defined as "the 12-month period beginning with the first month that the new rates could be placed in effect after application of the full suspension period" in general rate cases.

While most of the cases decided since have been resolved via black box settlements that were silent with respect to most traditional rate case parameters, the settlements and PUC orders have stated that the revenue requirements were intended to reflect the company-proposed fully forecasted test period and a test-period-end valuation of rate base.

In an Oct. 4, 2018 decision for UGI Utilities' electric operations, the PUC adopted an Administrative Law Judge's findings that "the plain language and policy of Act 11 supports [UGIU's] position. Historically, a fundamental principle of utility regulation is that a public utility should be permitted to include projects in rate base and earn a reasonable return on its investments after they became 'used and useful' for the utility's public service. However, Act 11 fundamentally altered ratemaking in Pennsylvania by adopting the FPFTY [fully projected future test year] to reduce the risks associated with regulatory lag."

On Dec. 21, 2017, the PUC initiated a proceeding to examine the rules and structures for fully forecasted rate case filings. The proceeding is ongoing.

State law, except for environmental-compliance investments and PUC-ordered plant upgrades, prohibits the inclusion of construction-work-in-progress, or CWIP, in rate base for a cash return. (Section updated 10/12/18)

Public Service Commission of South Carolina

The PSC relies upon a 12-month historical test period, with known and measurable adjustments that must be approved by the PSC. The commission has allowed a cash return on construction work in progress, or CWIP.

The Base Load Review Act, or BLRA, which became law in 2007, authorized the PSC to issue a project development order, or PDO, affirming the prudence of a utility's decision to incur preconstruction costs for a nuclear plant. When issuing a PDO, the PSC does not rule on the prudence or recoverability of specific cost items but instead rules on the prudence of the decision to incur preconstruction costs for the project. For baseload coal and nuclear plants, the BLRA also authorized the PSC to issue a BLRA order. A BLRA order constitutes an upfront determination that a plant is "used and useful" and that

associated proposed capital expenditures are prudent and ultimately should be reflected in rates as long as the plant is constructed within the estimated construction schedule, including authorized contingencies, and capital budget. After PSC issuance of a BLRA order, the utility is required to file quarterly reports with the commission and the Office of Regulatory Staff detailing the construction progress and costs of the plant until it begins commercial operation. For nuclear plants only, if requested by a utility, the BLRA order is to specify initial revised rates reflecting the utility's preconstruction and development costs. At least one year after the filing of an application for a BLRA order, and no more frequently than annually thereafter, the utility is permitted to file for PSC approval of revised rates reflecting a cash return on a nuclear plant's CWIP.

The PSC limited Duke Energy Carolinas LLC's, or DEC's, ongoing preconstruction spending at its Lee nuclear plant to the amount needed to keep the project viable, and DEC canceled its plans to construct the plant. The NCUC issued an order in June 2018 approving cancelation of the project.

South Carolina Electric & Gas Co., or SCE&G, had begun construction of the V.C. Summer units 2 and 3 nuclear facilities, with the rate recognition of the investment addressed through the BLRA procedure. However, in 2018 the South Carolina Legislature passed H. 4375, which prospectively repealed the BLRA and directed the PSC to remove from SCE&G's rates all increases imposed under the Act from 2011 onward. On July 2, 2018, the PSC directed SCE&G to reduce rates by roughly \$367 million, or 15%, to comply with the law. The rate reduction is to be effective retroactive to April 1. The rate reduction was implemented in August 2018. A lawsuit is pending in which SCE&G argues that the law is unconstitutional. (Section updated 11/12/18)

Public Service Commission of Utah

The PSC is permitted to establish rates based upon forecasted test periods that include projected data up to 20 months from the date a rate case is filed. In recent years, the PSC has typically relied upon an average original cost rate base for a test period that contains at least 17 months of projected data at the time cases were filed. It has not been a general PSC practice to allow a cash return on construction work in progress. (Section updated 3/17/17)

Public Service Commission of West Virginia

The PSC has traditionally relied upon an average original-cost rate base for a historical test period, but permits "known and measurable" adjustments. In a rate case completed in 2015, Mountaineer Gas had requested that the commission set rates based on a fully forecasted test year. This request was withdrawn without prejudice, as part of a settlement among the parties. Inclusion in rate base of construction work in progress, or CWIP, is not generally permitted, but has been allowed on occasions when utilities faced large generation and transmission construction projects.

CWIP treatment was authorized in 2006 for Appalachian Power Company related to the Wyoming-Jackson Ferry transmission line and the installation of scrubbers at the Mountaineer and Amos units 1, 2 and 3 coal-fired generation facilities. (Section updated 6/5/18)

Public Service Commission of Wisconsin

The PSC generally relies on an average original-cost rate base and a test period that is fully-forecasted when the new rates become effective. Working capital and construction-work-in-progress, or CWIP, are not included in rate base. However, the PSC allows for a cash return on working capital and may also authorize, on a case-by-case basis, a cash return on a portion, typically 50%, of a utility's electric and gas CWIP through adders that are incorporated into the return on rate base.

State law permits a utility that is proposing to purchase or construct an electric generating facility to apply to the PSC for an order specifying, in advance, the rate treatment, including a cost cap estimate and the equity return, that will apply to the plant over its economic life (see the Integrated Resource Planning section). (Section updated 8/13/18)

Public Utilities Commission of Nevada

The PUC relies upon year-end rate base valuations for test periods that generally conclude less than one year prior to the date of decision. State law permits electric and gas utilities to use a "hybrid" test year methodology consisting of historical test years with updates for known-and-measurable adjustments up to 210 days beyond the filing date.

Electric utilities may request the inclusion of construction work in progress, or CWIP, in rate base for facilities deemed to be "critical" (see the Integrated Resource Planning section). In recent years, the PUC has included CWIP in rate base for certain transmission and generation projects. (Section updated 5/19/16)

Public Utilities Commission of Ohio

Ohio law requires utilization of an original-cost rate base valued as of a "date certain," which can be no later than the date the rate case is filed. Statutes require that the test year conclude within nine months after the filing of a rate case application. The PUC has generally rejected adjustments that do not become known within the test period. State law provides for inclusion of construction work in progress in rate base at the PUC's discretion if a project is 75% complete. (Section updated 4/20/18)

Public Utility Commission of Texas

The PUC utilizes a terminal, i.e., year-end rate base value for a 12-month historical test period, with adjustments permitted for post-test-year plant additions and retirements, under certain circumstances.

With the exception of certain environmental compliance costs, the PUC generally has not permitted the utilities to include construction work in progress, or CWIP, in rate base for a cash return, and has only allowed it following a finding that such treatment was necessary to maintain the utility's financial integrity. However, the companies are permitted to adjust rates through surcharge mechanisms to reflect certain types of new transmission and distribution investment that goes into commercial operation between rate cases, thus reducing the regulatory lag associated with the exclusion of CWIP from rate base (see the Adjustment clauses section).

Legislation enacted in 2015 changed the rate case filing provisions for vertically integrated utilities outside of the Electric Reliability Council of Texas, allowing the companies to propose adjustments to test-year data that include actual information for an update period, and permit post-test-year adjustments for a natural-gas-fired plant. (Section updated 3/26/18)

Railroad Commission of Texas

In fully-litigated base rate cases that have come before the RRC in recent years, the Commission has relied on a year-end original cost rate base for a historical test period, with adjustments permitted for certain "known-and-measurable" changes. The RRC has generally not permitted a cash return on construction work in progress, but has permitted adjustments for plant placed into service subsequent to the test year end. (Section updated 3/25/18)

Regulatory Commission of Alaska

The RCA utilizes an average original-cost rate base and a historical test year. (Section updated 9/8/16)

Rhode Island Public Utilities Commission

The PUC has traditionally relied upon an average, original-cost rate base for an historical test period adjusted for "known and measurable" changes based upon a forward-looking "rate year," i.e. the first year the new rates would be in effect. Historically, the PUC has not permitted construction work in progress to be included in rate base. (Section updated 6/13/18)

South Dakota Public Utilities Commission

The PUC relies upon an average original cost rate base for a historical test period, but has permitted certain known-and-measurable post-test-year adjustments.

Historically, the PUC had not permitted utilities to earn a cash return on construction work in progress, or CWIP, although the commission is permitted to do so by state law in rate cases and through separate adjustment mechanisms.

Legislation enacted in 2012, permits the states' utilities that are purchasing or constructing generation, transmission, or distribution assets that are expected to have a material impact on customer rates to seek PUC approval to implement a rate plan rider that would provide for phase-in rate increases prior to the commercial operation of the related additions. Utilities seeking to implement such a rider are required to file for PUC approval prior to the start of construction or acquisition activities, and submit a cost-of-service analysis to the commission.

In 2015, the legislation was enacted, amending existing state law to with respect to phase-in rate plan riders. Under the new law, while operating under the rider, utilities now must submit annual cost-of-service filings, and the commission may adjust a utility's rates at any time up to one year following the conclusion of a rate plan. In addition, utilities operating under the rider are required to file a general rate case within 12 months after the conclusion of the rate plan, unless otherwise directed by the PUC.

In 2013, the PUC authorized Northern States Power-Minnesota, or NSP-MN, to implement an infrastructure rider, or IR, designed to recover certain costs, including expenses associated with certain capital additions placed into service in 2012 and

2013, and certain property taxes. In 2015, the IR was updated to reflect incremental infrastructure projects and the majority of existing projects in the IR were transferred to base rates. In addition, the IR no longer includes recovery of certain property taxes. The IR does not provide for a cash return on CWIP, and is designed to collect a revenue requirement only after the capital additions are placed into service. Through the utility's transmission cost recovery mechanism, NSP-MN has been permitted to earn a cash return on CWIP since 2012.

Also in 2013, the commission permitted Black Hills Power, or BHP, to implement a rider to recover construction financing costs — i.e., a cash return on CWIP. The rider was subsequently rolled into base rates and discontinued in 2015.

The PUC is also permitted to approve automatic adjustment mechanisms to facilitate recovery of the capital and operating costs associated with environmental compliance projects at existing generation plants as well as new or modified transmission facilities. Companies operating under such mechanisms may seek PUC approval to earn a cash return on the related CWIP. (Section updated 2/14/17)

Tennessee Public Utility Commission

The PUC generally utilizes average rate base valuations and establishes rates based upon forecasted test periods. The PUC permits construction work in progress to be included in rate base for a cash return. (Section updated 3/28/18)

Vermont Public Utility Commission

For utilities under traditional regulation, the PUC has generally relied upon a historical test period and an average rate base. While the PUC has adopted test periods that are generally about one year old at the date of decision, rates may reflect certain known and measurable post-test-year adjustments.

A cash return may be permitted on generation-related construction work in progress if the projects: are located in Vermont; rely on a renewable resource; and have received necessary PUC approvals. The facilities must also have a near-term — within 12 months — scheduled completion date. (Section updated 9/26/18)

Virginia State Corporation Commission

Rate case filings are generally tendered based on a year-end original cost rate base and a historical test period. However, the commission is required by statute to allow adjustments to rate base and cost of service components to reflect future costs that the commission finds can reasonably be expected to occur during the first year new rates will be in effect; this is known as the rate year. In relying on the rate year values, the commission is effectively utilizing a forecasted test year and an average projected rate base for the forecasted rate year.

For the purpose of biennial earnings reviews of the state's large electric utilities, Virginia Electric and Power Co. and Appalachian Power Co., the SCC looked at a two-year test period, ending at the end of the calendar year prior to the initiation of the review, and a two-year average rate base. Prospectively, earnings reviews are to be conducted triennially, and average three-year test periods are to be used (see the Rate case timing/interim procedures section).

Historically, inclusion of construction work in progress, or CWIP, in rate base for a cash return has not been permitted. However, state law permits the SCC to allow a cash return on CWIP for reliability-related generation projects, new generation facilities that will utilize Virginia coal, nuclear facilities, renewable resource projects, and certain other investments through project-specific rider mechanisms for such facilities. Annual adjustments under these riders use a fully forecasted test year that is trued-up in subsequent annual proceedings (see the Adjustment clauses section). (Section updated 7/19/18)

Washington Utilities and Transportation Commission

Historically, the WUTC has relied upon average original-cost rate base valuations. However, the most recent energy cases have utilized year-end rate bases. In such instances, the WUTC has required a demonstration of one of four conditions to justify end of period rate base — abnormal growth in plant; inflation and/or attrition; regulatory lag, or failure of a utility to earn its authorized rate of return over a historical period.

The commission utilizes historical test years that are adjusted for known-and-measurable changes, and has, at times, adopted attrition adjustments. In addition, the WUTC had indicated, as part of a previous generic investigation into energy conservation incentives, that it would consider, in the context of a general rate case, "an appropriate attrition adjustment designed to protect the company from lost margin due to any reason." In a September 2016 rate case for PacifiCorp, the WUTC adopted a

settlement that provided for a multi-year rate plan. State statutes specify that the WUTC may include construction work in progress, or CWIP, in rate base to the extent that the commission finds that inclusion of such costs would be in the public interest. (Section updated 2/8/17)

Wyoming Public Service Commission

The commission generally relies upon a year-end original-cost rate base for a historical test period, updated to reflect known-and-measurable changes. However, in recent rate cases, PacifiCorp has been permitted to utilize test years that have contained forecasted data.

Historically, the commission has not permitted utilities to earn a cash return on construction work in progress, or CWIP, unless the related projects were placed into service prior to the start of the hearing process in a general rate case. However, in 2012, the PSC authorized Cheyenne Light, Fuel and Power, or CLF&P, to implement a rider that provided for a cash return on CWIP associated with the 132-MW, natural-gas fired Cheyenne Prairie Generating Station, jointly owned by CLF&P and an affiliate. The revenue requirement collected under the rider was subsequently rolled into base rates and the rider was discontinued. (Section updated 12/13/16)

**KENTUCKY-AMERICAN WATER COMPANY
CASE NO. 2018-00358
ATTORNEY GENERAL'S FIRST REQUEST FOR INFORMATION**

Witness: Ann E. Bulkley

- 37.** Provide the source data and documentation for Figure 2 on page 15 of Ms. Bulkley's Direct Testimony.

Response:

Stock Market Volatility, Trade, International Uncertainties Reduce Rate, Growth Forecasts

Domestic Commentary Volatility reigns in the stock market, still. Just as we were writing the opening lines of this commentary, the Dow Jones Industrial Average swung down 250 points and back up 560 points. Indeed, by late in the day of our writing, December 26, the Dow had gained 1086 points, the largest one-day gain ever. But the next morning, that index fell back 400 points. Further, as we described last month, a key measure of stock price volatility, the CBOE's VIX index, has itself been volatile. This continued in December; the VIX had oscillated around 21.66 early in the month, but ahead of the December 18-19 meeting of the Federal Open Market Committee, it surged, and by Christmas Eve, it was up almost 67% to 36.07.

The nervousness this signals is making itself felt among policymakers and the Blue Chip Financial Forecasts panel. So far, however, their reactions have been measured, not dramatic. A good summary is apparent in the statement issued by the Federal Open Market Committee after its meeting on December 19. The five previous FOMC meetings' statements included the simple sentence, "Risks to the economic outlook appear roughly balanced." But at the conclusion of this latest meeting, the statement read, "The Committee judges that the risks to the economic outlook are roughly balanced, but will continue to monitor global economic and financial developments and assess their implications for the economic outlook."

The immediate policy result at that meeting was the universally expected 25-basis-point hike in the federal funds rate to the range of 2-1/4% to 2-1/2%. While taking this well-anticipated action, the FOMC did pare back its own expectations for later moves. A new dot-plot survey of FOMC members shows that by the end of 2019, the highest individual projection is now 3% to 3-1/4%, down from 3-1/2% to 3-3/4% in the September forecasts. The median year-end rate would be 2.9%, down from 3.1% in the prior calculation. The Fed's "longer-run" projection indicates a 2.8% funds rate, down from 3.0% previously. These rates would accompany GDP growth in 2019 of 2.3%, also 0.2%-point below the prior forecast of 2.5%. PCE inflation would be lower, at 1.9% across 2019 versus 2.0% forecast in September. Thus, the reduced number of tightening actions in the funds rate would still be sufficient to keep inflation under control as GDP growth slows, but doesn't weaken sharply.

The Blue Chip panel basically agrees with these conclusions. The average of its federal funds rate projections for Q4 2019 is also 2.9%. The average GDP forecast across the year – Q4 2019 over Q4 2018 – is 2.24%, that is, just slightly softer than the FOMC's median. The Blue Chip survey doesn't include the PCE price index this month, but the panel's expectations for the overall GDP price index and the CPI are both 2.2% across the year. Compared with last month's projections, GDP is down 0.2%-point and the GDP price index is lower by 0.1%-point; the CPI is 2.20% this month versus 2.23% in the November survey. This month's survey took place on December 20 and 21, that is, immediately after the FOMC meeting.

Notably, the Blue Chip panel, responding to this month's Special Questions, says the stock market volatility has done little to their economic outlook, with roundly 60% of respondents asserting that their GDP projections have not been affected. But the reverse is the case for an accompanying query about their expectations for Fed policy: there 62% say the volatility has caused them to moderate their monetary policy projections.

The panel expects the first Fed move in 2019 to come in March, the reply given by exactly half of the respondents. Nine participants look for that first 2019 rate hike in April and nine, not until June, presum-

ably as the Fed assesses the fall-out from the current stock market situation and from the ongoing trade disputes.

In fact, in response to other Special Questions, some panelists – 16 of them – say that those trade disputes, especially with China, have prompted them to shave 0.1%-point off their estimates of 2018 GDP growth, and for 2019, 26 panelists say they have reduced their growth forecast by 0.2%-point owing to the trade dislocations.

Notably, while a few forecasters have negative GDP moves in early 2020, there is not a widespread indication that recessionary conditions might emerge. In answering another Special Question the panel says the chances for recession average 27.4% for 2019, and for 2020, the probability does rise to 38.8%. Growth in the first and second quarters of 2020 is seen at just 1.6% and 1.5%, respectively, so the economy would be performing well below its potential.

While there are no apparent extreme financial risks, there are signals that not all is well. The yield curve has remained relatively flat as the Fed has raised short-term rates, while the Fed's policy in the long end of letting its own portfolio of bonds run down does not seem to have lifted long-term rates. Nor has an increased inflation premium been reflected in long-term yields. As of December 26, the yield on 10-year Treasury notes was 2.81% and that on the 2-year note was 2.61%, so the 10-year-2-year spread was 20 basis points; that's actually a bit wider than earlier in December, but still historically very narrow. An inverted curve, with that spread negative, has often signaled the coming of recession. Almost half of the Blue Chip Financial panel – 45.2% – says inversion could happen during 2019; that's up from just 27.5% in the November issue of this publication and 23.1% in October's. So there is a cautionary sign here, to be sure.

Credit spreads are a bit wider this month. High-grade corporate bonds have recently run 105-110 basis points over 30-year Treasury bonds; this is about 15 basis points more than earlier in the fall and 27 basis points more than in January 2018. However, this spread has been wider still ahead of periods of greater economic weakness. So this is another cautionary note, but not a red-light. Lower-rated bonds also have wider spreads than earlier in 2018. BBB-rated bonds have lately been 130 basis points above the high-grade corporates versus 85-90 basis points last January and early February. However, both of these credit spread measures are not nearly as wide as they were during the 2008 financial crisis. So, again, these can perhaps be seen as flashing yellow signals but not red lights.

A fundamental source of risk is the federal government shutdown. At this time, it is hard to forecast how long it will last or whether a constructive solution will be found to the immigration-related issues that brought it on. The immediate direct cost to the economy is likely to be very modest, but the implications for policymaking going forward are not constructive and add qualitative risk to the economic environment.

Finally, we cannot ignore the risk evident in the sluggish growth elsewhere in the world. As detailed on page 3, other central banks have softened the tone of their policy statements as data appear weaker than expected. The uncertainty over Brexit is an obvious concern in the U.K. itself and in Europe, but also to markets elsewhere. China's economy remains sluggish relative to its historical high-growth trends and over the last couple of years, it has tended to be a net recipient of funds from the rest of the world, a reversal of its longstanding role as a net provider.

Forecasts for interest rates and the Federal Reserve's Major Currency Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index and Consumer Price Index are seasonally-adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; LIBOR quotes from Intercontinental Exchange. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP and GDP Chained Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index (CPI) history is from the Department of Labor's Bureau of Labor Statistics (BLS). *Interest rate data for Q4 2018 based on historical data through the week ended December 14. *Data for Q4 2018 Major Currency Index based on data through week ended December 14. Figures for Q4 2018 Real GDP, GDP Chained Price Index and Consumer Price Index are consensus forecasts based on a special question asked of the panelists this month.

International Commentary Global financial markets continued to be rocked during December by concerns on many fronts. Leading the list was the escalating trade tensions between the US and China. But there were many more. Global economic growth ebbed further and the slowdown is spreading. The US Fed raised its policy interest rate for the fourth time this year with the US yield curve continuing to flatten. Forecasters have raised their odds of a US recession occurring in either 2019 or 2020 (to a meaningful nearly 2 in 5 in 2020). Britain could be heading for a chaotic exit from the European Union in late March. Italy and the EU continue to tussle over budget issues. And the European Central Bank (ECB) ended its asset purchase program while lowering both its near-term inflation and GDP forecasts. Is it any wonder that equity and bond markets worldwide were extremely challenged during the month?

The ECB confirmed at its December 13 meeting that it would conclude its asset purchase program (APP) at the end of December as it had announced previously and reaffirmed that key interest rates would “remain at their present levels at least through the summer of 2019.” It also provided forward guidance on reinvestment. It intends “to continue reinvesting, in full, the principal payments from maturing securities purchased under the APP for an extended period of time past the date when it starts raising the key ECB interest rates.”

In the press conference following the meeting, ECB President Draghi tilted a little more dovish, noting that recent incoming data have been weaker than expected with the balance of risks moving to the downside. The ECB marginally lowered its forecasts for Euro Area GDP growth by 0.1%-point for both 2018 and 2019. Moreover, with inflation well below the ECB’s just-under 2% target, Draghi noted that “significant monetary stimulus is still needed to support the further build-up of domestic price pressures.” The market had generally looked for the first rate hike in September 2019, but the probability of a September hike has now fallen to about 20%.

Brexit continues to dominate both the economy and politics in Britain. Parliament is unlikely to accept the latest negotiated agreement with the EU, and the EU says it won’t reopen negotiations. Consequently, the possibility of a so-called “hard” Brexit (that is, one without an agreement between the UK and the EU) has risen considerably. This puts the Bank of England even more on hold. At its December 20 meeting, the Bank noted that both downside risks to global growth and Brexit uncertainty had intensified since its previous meeting and that these were weighing on the near-term outlook for the UK economy. Still, the Bank concluded that going forward, excess demand was expected to emerge, which would require a further tightening of monetary policy. But, for the markets, such a move would seem to be a long way off.

Once again, nothing new emerged from the December 19-20 meeting of the Bank of Japan. It left its policy positions (on both rates and asset purchases) unchanged with two of the nine members of the policy committee continuing to vote for further easing. Inflation in November moved even further below the Bank’s 2% objective with the headline rate slipping to 0.8% y/y and the core rate to 0.3% y/y.

The Bank of Canada left its policy interest rate unchanged at its December 5 meeting, as had been widely expected. However, in the rate announcement, the Bank noted that the recent downward revisions to GDP indicate that “there may be additional room for non-inflationary growth.” And in a speech the following day, Governor Poloz reiterated that the policy rate will need to rise into the neutral range, but he also said that “the current level of interest rates remains appropriate for the time being.” The markets interpreted these comments to mean that the pace of rate hikes going forward would slow. However, the strong November employment report (released on December 7) provided some new life to near-term rate-hike expectations. The Bank has become extremely data dependent and most recently the data appear to be pulling the rate decision in both directions.

Sandy Batten (Haver Analytics, New York, NY)

Forecasts of panel members are on pages 10 and 11. Definitions of variables are as follows: ¹Three month rate on interest-earning money market deposits denominated in selected currencies. ²Government bonds are yields to maturity. ³Foreign exchange rate forecasts for U.K., Australia and the Euro are U.S. dollars per currency unit. For the U.S. dollar, forecasts are of the U.S. Federal Reserve Board’s Major Currency Index.

Viewpoints:

A Sampling of Views on the Economy, Financial Markets and Government Policy Excerpted from Recent Reports Issued by our Blue Chip Panel Members and Others

Is the Fed Out of Touch?

The Federal Open Market Committee took a step in the dovish direction at its latest meeting, but the shift was surprisingly small. The wording of the policy statement was altered to signal more uncertainty in the economic outlook, but officials still had an upbeat view on growth prospects. Indeed, Chairman Powell indicated in his press briefing that recent developments had not fundamentally altered the economic outlook. The new dot plot suggested that the Fed might be less aggressive in raising interest rates, but only modestly so: three tightenings in the next two years rather than four.

This optimistic view of Fed officials seems at odds with the swoon in the stock market. The retreat of approximately 13 percent in the S&P 500 from its peak in October to the day before the FOMC meeting could be signaling weakness in the economy not yet apparent in the data. Alternatively, the drop in share values could trigger negative wealth effects or damage confidence, which could push the economy lower.

Mr. Powell downplayed the drop in equity values and defended the FOMC's upbeat perspective by noting that officials take a broad view of the financial environment; they do not focus on only one market. Such a perspective does indeed leave a different impression on growth prospects than the stock market does. For example, credit spreads have increased in recent weeks, but they remain low by historical standards. In addition, the spreads have widened by Treasury yields declining rather than by private rates jumping. Thus, household and business borrowers still have attractive financing opportunities. And financing seems readily available, as the growth of business and consumer loans at commercial banks has been brisk in recent months.

Similarly, the foreign exchange value of the dollar has increased recently, which would dampen trade prospects, all else equal. However, the dollar has not broken out of the range evident in the past few years.

An index of financial conditions published by the Federal Reserve Bank of Chicago arguably provides the broadest perspective on financial conditions, as this measure is a composite of 105 financial indicators. This index has barely changed in recent months, and its recent negative readings indicate easier-than-normal financial conditions. (This index is constructed to have an average value of zero over the life of the series, which goes back to 1973. The extreme tightness that emerged during the financial crisis would require low readings in other periods to generate an average value of zero. Thus, one might view recent observations as an indication that current conditions are easy only relative to those during the crisis. However, recent readings are similar to those in other non-crisis years. The construction of an index excluding the crisis years would most likely show that recent results were mid-range, certainly not tight.)

A sub-index from The Chicago Fed that focuses on bond and stock market measures shows more deterioration than the headline measure does, but it too remains below historical norms and appears to be about average relative to non-crisis periods.

Thus, Mr. Powell has a point. If one takes a broad perspective, recent financial developments are not alarming.

Will the Fed Follow the Path in the Dot Plot? Fed officials have emphasized that the policy environment has shifted. Interest rate increases in the prior few years involved little mystery or controversy because all observers recognized that monetary policy was unusually accommodative and must return to a normal stance. While the concept of "normal" policy is vague, the Fed is no doubt close to such a stance, and thus

policy decisions are no longer almost automatic. Decisions are now data dependent: the Fed will need to justify hikes in 2019 with signs of brisk economic growth or accelerating inflation.

Thus, the Fed might not follow the path of rates suggested by the dot plot. The policy statement altered the wording to indicate more uncertainty in the economic outlook ("judges" rather than "expects" and "monitor global economic and financial developments"). The statement still alluded to balanced risks, but in fact, officials are aware that downside risks have emerged, and manifestations of those risks could keep the Fed on the sidelines.

At the same time, two aspects of the new dot plot have hawkish implications and lead us to stick with the view that the Fed will be raising interest rates twice next year. First, the dispersion of the dots tightened relative to those in September. The spread between the highest and lowest rates envisioned at the end of 2019 totaled 75 basis points in the latest plot versus 150 basis points in September; the standard deviation narrowed to 0.26 percent from 0.40 percent in September. The spread in 2020 narrowed to 125 basis points from 175 in September; the standard deviation shifted to 0.34 percent from 0.46 percent. A tighter distribution suggests that officials are in closer alignment in their views and therefore more likely to come to agreement on policy changes.

Another striking aspect of the dot plot was the apparent support for adopting a restrictive policy stance. The long-run estimate of the federal funds rate included in the Summary of Economic Projections could be interpreted as an official's view of the neutral interest rate, and the average value of all the long-run dots might be viewed as the Committee's collective assessment of the neutral rate. That average rate totaled 2.844 percent in the latest set of projections. Five policymakers envisioned the funds rate slightly above this level at the end of 2019 (2.875 percent) while six saw a larger gap with a year-end funds rate of 3.125 percent. For 2020, only two officials saw the federal funds rate below this view of neutral, while nine saw the overnight rate substantially above neutral (3.125 percent or higher). Thus, reaching a neutral stance might not be enough for many Fed officials. The coming year will be an interesting one for monetary policy. The economic outlook is uncertain, and compelling arguments for both holding policy steady and for tightening further will no doubt be offered. We are currently looking for two rate hikes (probably May and September), but we also are keeping an open mind.

Michael Moran (Daiwa Capital Markets America, NY, NY)

Where The Fed May Be Wrong

Recessions are typically triggered by policy mistakes and the Federal Reserve may very well be on the road to making one. The policy statement that accompanied the Fed's latest rate hike attempted to allay fears the Fed would tighten too much by acknowledging the economic outlook has diminished and that the balance of risks was now roughly even. FOMC participants also slightly lowered their expectations for the federal funds rate and now call for just two rate hikes in 2019 and one more after that, while the drawdown of the Fed's balance sheet is expected to remain on auto-pilot at \$50 billion a month in 2019.

The financial markets provided some powerful real-time feedback to the Fed. Stocks had rallied just before the Fed's decision was released, gave back their gains after digesting the policy statement and then sold off heavily during Chairman Powell's testimony. The yield curve also flattened further and remains inverted between the two- and five-year notes.

Viewpoints

A Sampling of Views on the Economy, Financial Markets and Government Policy Excerpted from Recent Reports Issued by our Blue Chip Panel Members and Others

The markets shot down the Fed's dovish tightening because they feel economic growth may not be as strong as the Fed believes and is certainly not strong enough to hold to the notion that monetary policy, in its entirety, remains short of neutral. Economic growth may not be as 'strong' as the Fed believes. The strength in the U.S. economy has been narrowly focused, with the energy and technology booms accounting for a disproportionate share of economic growth. Both sectors now appear to be slowing, with the former struggling under the weight of sluggish global economic growth and lower oil prices, while the latter is facing an onslaught of government oversight concerning privacy concerns and anti-trust matters. Growth in the more cyclical parts of the economy is also slowing, with demand for home sales and capital goods flagging for the past few months.

The Fed's confidence about the strength of the economy may be grounded in the satisfaction that the unemployment rate remains so low at just 3.7%. The unemployment rate is a lagging indicator, however, and monetary policy works with a long and variable lag. Moreover, the IT revolution and growth in online job search platforms have likely changed the way job seekers interact with the labor force. This may help explain why the surge in job openings has not led to a resurgence in wage increases.

The Fed may also be underestimating the impact the drawdown of the Fed's balance sheet and continuation of enhanced forward guidance are having on global liquidity. Both policies were projected to have strong positive effects when they were implemented. Why wouldn't they have an equally strong impact now that they are headed in the other direction? Moreover, the high degree of certainty the Fed has displayed that these policies will continue, effectively on auto-pilot at a time that growth is decelerating, has sent a foggy message to the financial markets, which has likely increased uncertainty - hence the rush out of stocks and into bonds and the dollar.

Mark Viter (Wells Fargo Securities, Charlotte, NC)

Markets in a Powell Mood

It's been a long December, to quote Counting Crows. Normally, this final Thought is dedicated to summarizing the year, and highlighting key emerging trends. All those niceties have been overwhelmed by the extremely sour financial markets to end 2018, with equities, oil, and bond yields all caught in a tailspin. Just as one prime example, the S&P 500 is currently down almost 11% for the month (and still five trading days left!), on pace for its worst single month since 2009 and its worst December since 1931. And, it's not as if the market was coming off an immediate high, having dropped heavily in October as well, so Q4 is now down nearly 16% and on course for the worst quarter in a decade.

The root cause of the market's angst is the prospect for slower growth both globally and in the U.S. in 2019. But the mild cooling that we, and the consensus, look for can hardly explain the market trauma. Loaded on top have been the nagging concerns about the U.S./China trade showdown, steady Fed tightening, a variety of geopolitical hotspots, and now a potential U.S. government shutdown. A partial shutdown itself has almost no real-world economic impact. But the sense of political paralysis, coming even before the Democrats officially take back the House, is weighing on sentiment.

The latest sell-off can also be traced to a different corner of Washington, as stocks took another leg lower following the FOMC meeting. While the latest rate hike to a 2.25%-to-2.50% range was no surprise, the Statement and Chair Powell's comments were deemed insufficiently less hawkish than anticipated, even as the Fed broadly scaled back its view on where rates were going. In particular, the market all but re-

belled at Powell's (seemingly innocuous) remark that the balance-sheet unwind was going smoothly and would remain in place. Notably, one of the President's premeeting tweet/harangues had specifically griped about the potential \$50 billion of liquidity removal per month. (For reference, the Fed's balance sheet has dropped \$360 billion in the past year, or a bit more than 8%, to a measly sum just above \$4 trillion—versus less than \$1 trillion in the pre-crisis years.) Meantime, the combination of sagging stocks and the oil market's air-pocket (WTI is now down 38% from the October peak) has dragged down bond yields globally. After topping out as recently as early November, Treasury yields have come tumbling down, with every maturity from 3-years and out falling by at least 40 bps from the highs. Example: 10s hit a seven-year high on November 9 at 3.24%, and have since plunged 44 bps to 2.80%. That's still up almost 40 bps since the start of the year, but leaves the annual back-up much more subdued. We certainly would not want to end 2018 on a down note, especially since there were so many positive things to say about this year's overall economic performance. After all, global growth had another above-average year, jobless rates fell to multi-decade lows across much of the industrialized world, and the inflation ghost of cycles past again failed to rear its ugly head. Simply put, we believe that much of the current negativity in financial markets is overdone, and is quite simply exaggerating the downside.

Here are just some of the supportive factors we would point to when considering next year's economic outlook, as a partial antidote to the market weakness:

- The slide in oil prices will trim inflation, and leave more money in consumers' pockets. Canadian inflation and the U.S. PCE deflator both already dipped below 2% in November.
- Income growth remains solid, with U.S. real disposable income up almost 3% in the past year, which will help support spending.
- Businesses are operating near capacity and are still looking to hire and to invest, as evidenced by the solid Business Outlook Survey from the BoC.
- Trade uncertainty, at least within North America, will be reduced next year, assuming the USMCA is ratified by Congress in coming months.
- Fiscal policy on both sides of the border will add modestly to growth, although admittedly less so than in 2018 for the U.S.
- The interest rate environment now looks much less threatening for growth, with expectations of further rate increases pulling back sharply in recent weeks for the Fed and the Bank of Canada. While we are officially looking for two rate increases in the coming year from both central banks, it's clear that the risks to that call are to the low side. Just one example of how dramatically rates have shifted recently, 10-year Canadian government bond yields have dropped back to around 2% and are now down from where they started 2018.

The point is that with inflation pressures cooling off, and chilled further by the slide in oil prices, central banks have the flexibility to stop their rate-hike campaign if financial markets weaken further and/or if growth slows more than expected. So, overall, while there are clear reasons to believe that growth will cool in both Canada and the U.S. in 2019, we believe that there are still plenty of supportive factors for the economy, and that much of the negativity in markets is overdone.

As the song continues... it's been a long December, and there's reason to believe, maybe this (coming) year will be better than the last.

Douglas Porter (BMO Capital Markets, Toronto, Canada)

Special Questions:

1. Please provide your forecasts of the Q4 2018 change (q/q, saar) in real GDP, the GDP Price Index and the Consumer Price Index.

| | <u>Real GDP</u> | <u>GDP Price Index</u> | <u>Consumer Price Index</u> |
|-------------------|-----------------|------------------------|-----------------------------|
| Consensus | 2.60% | 1.99% | 1.79% |
| Top 10 Average | 3.09% | 2.37% | 2.43% |
| Bottom 10 Average | 2.04% | 1.60% | 1.07% |

2. At which meeting will the FOMC NEXT raise interest rates?

| (Percentage of those responding) | | | | |
|----------------------------------|------------------|---------------------|------------------|--------------|
| <u>Jan 29-30</u> | <u>Mar 19-20</u> | <u>Apr 30-May 1</u> | <u>Jun 18-19</u> | <u>Later</u> |
| 2.3% | 50.0% | 20.5% | 20.5% | 6.8% |

3. There's been heightened discussion recently about how much the FOMC might raise rates altogether during 2019. What is your current estimate?

| Total increase in federal funds rate target in 2019: (Percentage of those responding) | | | | | |
|--|----------------|----------------|----------------|-----------------|---------------------------|
| <u>0 b.p.</u> | <u>25 b.p.</u> | <u>50 b.p.</u> | <u>75 b.p.</u> | <u>100 b.p.</u> | <u>More than 100 b.p.</u> |
| 6.8% | 6.8% | 54.5% | 31.8% | 0.0% | 0.0% |

4. What will be the terminal level of the fed funds rate during the Fed's current tightening cycle?

| | <u>Peak fed funds rate</u> |
|-------------------|----------------------------|
| Consensus | 3.10% |
| Top 10 Average | 3.71% |
| Bottom 10 Average | 2.66% |

4a. Is this above, below or equal to your perceived "neutral" fed funds rate?

| (Percentage of those responding) | | |
|----------------------------------|--------------|-----------------|
| <u>Above</u> | <u>Below</u> | <u>Equal to</u> |
| 42.9% | 4.8% | 52.4% |

5. The stock market has been quite volatile since early October and the major equity price indexes have basically erased all of their prior gains for the year 2018. Has this volatility started to affect your economic outlook? Your outlook for Fed policy?

| <u>GDP outlook</u> | | <u>Fed policy</u> | |
|--------------------|-----------|-------------------|-----------|
| <u>Yes</u> | <u>No</u> | <u>Yes</u> | <u>No</u> |
| 40.5% | 59.5% | 61.9% | 38.1% |

6. Trade negotiations, especially with China, are moving along in fits and spurts. Does the trade issue impact your GDP forecast and by how much?

| | (Percentage of those responding) | | |
|------|----------------------------------|------------|-------------------------|
| | <u>No</u> | <u>Yes</u> | <u>If yes, how much</u> |
| 2018 | 61.0% | 39.0% | -13% |
| 2019 | 21.2% | 78.8% | -18% |

7. What is your forecast for the unemployment rate in December 2018? December 2019?

| | Unemployment rate in December: | |
|-------------------|--------------------------------|-------------|
| | <u>2018</u> | <u>2019</u> |
| Consensus | 3.7% | 3.6% |
| Top 10 Average | 3.7% | 4.0% |
| Bottom 10 Average | 3.5% | 3.2% |

8. The spread between 2-year Treasury notes and 10-year Treasuries recently moved in a range of 11-15 basis points, the smallest since its inversion in 2007. Such inversion can signal oncoming recession. Do you think this key portion of the yield curve will invert during 2019?

| (Percentage of those responding) | |
|----------------------------------|-----------|
| <u>Yes</u> | <u>No</u> |
| 45.2% | 54.8% |

9. What might be the probability of a recession starting in 2019? If not this year, what about 2020?

| | <u>2019</u> | <u>2020</u> |
|-------------------|--------------|--------------|
| Consensus | 27.4% | 38.8% |
| Top 10 Average | 43.8% | 64.5% |
| Bottom 10 Average | 15.9% | 21.2% |

Rating Action: Moody's changes outlooks on 25 US regulated utilities primarily impacted by tax reform

19 Jan 2018

New York, January 19, 2018 -- Moody's Investors Service, ("Moody's") has changed the rating outlooks to negative from stable for 24 regulated utilities and utility holding companies; and to stable from positive for one utility holding company in the United States. The short-term and long-term ratings for all 25 companies were affirmed.

RATINGS RATIONALE

"Today's action primarily applies to companies that already had limited cushion in their rating for deterioration in financial performance, will be incrementally impacted by changes in the tax law and where we now expect key credit metrics to be lower for longer," said Jim Hempstead, a Managing Director at Moody's. "Utilities will work closely with state regulators to try to mitigate the negative impact of tax reform and in some cases they may seek to refine their corporate financial policies. Where successful, their rating outlooks could revert to stable."

Tax reform is credit negative for US regulated utilities because the lower 21% statutory tax rate reduces cash collected from customers, while the loss of bonus depreciation reduces tax deferrals, all else being equal. Moody's calculates that the recent changes in tax laws will dilute a utility's ratio of cash flow before changes in working capital to debt by approximately 150 - 250 basis points on average, depending to some degree on the size of the company's capital expenditure programs. From a leverage perspective, Moody's estimates that debt to total capitalization ratios will increase, based on the lower value of deferred tax liabilities.

The change in outlook to negative from stable for the 24 companies affected in this rating action primarily reflects the incremental cash flow shortfall caused by tax reform on projected financial metrics that were already weak, or were expected to become weak, given the existing rating for those companies. The negative outlook also considers the uncertainty over the timing of any regulatory actions or other changes to corporate finance policies made to offset the financial impact.

The change in outlook to stable from positive for American Electric Power Company, Inc. (AEP, Baa1 stable) reflects Moody's calculations that the projected ratio of cash flow before changes in working capital to debt, incorporating the effects of tax reform, will remain in the mid-teens range. At this level, Moody's believes AEP's Baa1 rating is appropriate.

The vast majority of US regulated utilities, however, continue to maintain stable rating outlooks. We do not expect the cash flow reduction associated with tax reform to materially impact their credit profiles because sufficient cushion exists within projected financial metrics for their current ratings. Nonetheless, further actions could occur on a company specific basis.

Over the next 12 to 18 months, Moody's will continue to monitor the financial impact of tax reform on each company, including its regulatory approach to rate treatment and any changes to corporate finance strategies. This will include balance sheet changes due to the reclassification of excess deferred tax liabilities as a regulatory liability and the magnitude of any amounts to be refunded to customers. If the financial impact of tax reform is more severe than Moody's initial estimates or the companies fail to materially mitigate any weaknesses in their financial profiles, the ratings could be downgraded.

That said, Moody's expects that most utilities will attempt to manage any negative financial implications of tax reform through regulatory channels. Corporate financial policies could also change. The actions taken by utilities will be incorporated into the credit analysis on a prospective basis. As a result, it is conceivable that some companies will sufficiently defend their credit profiles. For these companies, it is possible for the outlook to return to stable.

Potential regulatory offsets to tax-related cash leakage could include: accelerated cost recovery of certain regulatory assets or future investment; changes to the equity layer or allowed ROEs in rates, and other actions. Changes to corporate financial policies could include changes to capitalization, the financing of future

investments, dividend growth, or others. Some of these corporate measures could have a more immediate boost to projected metrics than certain regulatory provisions, which may take time to approve and implement.

The principal methodology used in rating Public Service Company of Oklahoma, Southwestern Public Service Company, Southern Company (The), Alabama Power Company, Alabama Power Capital Trust V, Southern Elect Generating Co, South Jersey Gas Company, Wisconsin Gas LLC, American Electric Power Company, Inc., Duke Energy Corporation, Piedmont Natural Gas Company, Inc., Avista Corp., Avista Corp. Capital II, ONE Gas, Inc, New Jersey Natural Gas Company, Northwest Natural Gas Company, Questar Gas Company, Entergy Corporation, Consolidated Edison, Inc., Consolidated Edison Company of New York, Inc., Brooklyn Union Gas Company, The, KeySpan Gas East Corporation, and Orange and Rockland Utilities, Inc. was Regulated Electric and Gas Utilities published in June 2017. The principal methodology used in rating American Water Works Company, Inc. and American Water Capital Corp. was Regulated Water Utilities published in December 2015. Please see the Rating Methodologies page on www.moody.com for a copy of these methodologies.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be

assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

The relevant office for each credit rating is identified in "Debt/deal box" on the Ratings tab in the Debt/Deal List section of each issuer/entity page of the website.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$2,700,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

American Water Works Company, Inc.

American Water Works' acquisition of Pivotal Home Solutions is credit negative

From [Credit Outlook](#)

Last Wednesday, [American Water Works Company, Inc.](#) (AWK, A3 negative) announced an agreement with [The Southern Company](#) (Baa2 negative) to acquire Southern's home warranty business, Pivotal Home Solutions, for a total consideration of \$365 million, including approximately \$7 million of working capital. AWK plans to finance the acquisition with an equal mix of debt and equity. The acquisition is credit negative for AWK because it increases its unregulated business exposure, particularly to services unrelated to the water business.

Although the transaction is slightly positive to AWK's ratio of funds from operations (FFO) to net debt, we expect the company's credit metrics to weaken over the next two years owing to continued debt-funded growth, an increasing dividend and tax leakage resulting from US federal tax reform.

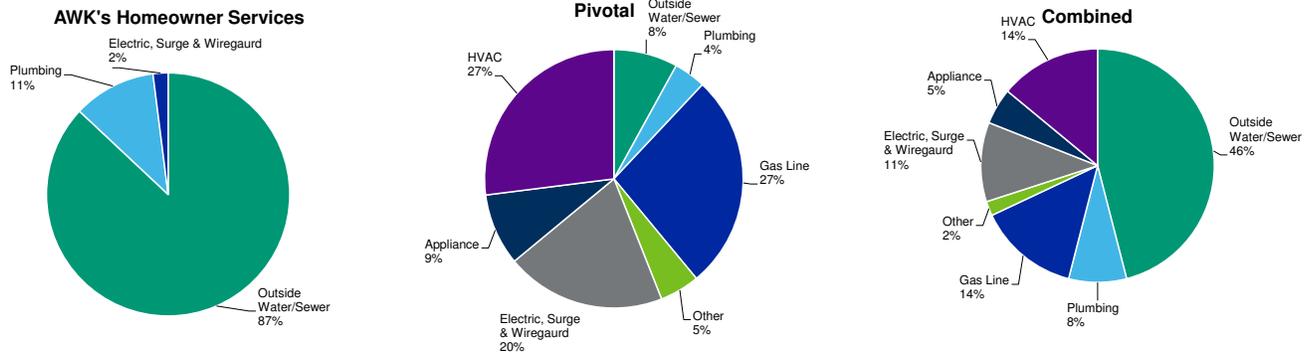

AWK plans to permanently finance half of the acquisition with debt issued through its non-operating financing subsidiary [American Water Capital Corp](#) (AWCC, A3 negative). We expect that this debt, which is about 3.75x of estimated Pivotal EBITDA, will be pushed down to American Water Enterprises Inc., which holds the company's market-based businesses, and will be supported by Pivotal's EBITDA. However, we estimate that the percentage of debt at AWCC not recovered in utility rates will increase to approximately 25% following the transaction from 23% at the end of 2017, a credit negative.

The acquisition purchase price implies an EBITDA multiple of 7.5x based on Pivotal's 2017 full-year EBITDA. We see an uplift to AWK's FFO/net debt ratio of 20-30 basis points with the additional cash flow from Pivotal and the associated debt financing. However, with our expectation that AWK's financial metrics will weaken, we continue to expect its FFO/net debt ratio over the next several years to hover near our previously indicated 15% quantitative downgrade guidance for an A3 rating.

We generally view AWK's unregulated businesses as neutral to the company's overall credit because they constitute less than 15% of operations and are largely within AWK's core competencies of water system operations. At the end of 2017, unregulated operations were about 5% of AWK's EBITDA and approximately 9% of net income. With the addition of Pivotal to AWK's existing homeowner services business, we expect that unregulated operations will increase to approximately 8% of consolidated EBITDA and approximately 14% of net income over the next few years. Although the contribution of unregulated operations remains below 15%, Pivotal adds to AWK operations that are higher risk relative

to the utility operations because they depend on market prices for cost recovery and are subject to greater competition. Pivotal also adds services such as gas line and HVAC operations, as shown in the exhibit below, that are not related to AWK's core business.

Pivotal acquisition increases AWK's non-water/wastewater contracts

Company Overview

American Water Works Company, Inc. (American Water) is a New Jersey-based holding company whose subsidiaries provide water-related and wastewater-related services.

As of 31 December 2015, American Water operated in 47 US states, the District of Columbia and Canada, serving approximately 15 million people. In the financial year ended 31 December 2015 (2015), it reported revenue of USD3.2 billion.

American Water originated in 1886 with the establishment of American Water Works & Guarantee Company. In 1935, it was renamed American Water Works Company, Inc. In 1947, it became publicly traded on the New York Stock Exchange (NYSE). Over 2003–08, the company was privately owned, but was relisted on the NYSE in 2008 through an initial public offering (Ticker: AWK). As of 31 December 2015, the company's largest shareholder was BlackRock, Inc., which owned 10.2% of its total share capital.

Business Description

American Water is a holding company whose subsidiaries provide water-related and wastewater-related services to approximately 15 million people. It provides water and sewer line protection services to households and operates and maintains water and wastewater facilities for the US military, municipalities, and the food and beverage industry.

The company originated in 1886 with the establishment of American Water Works & Guarantee Company to build and acquire water systems in McKeesport, Pennsylvania. In 1935, it was renamed American Water, and in 1947 it became publicly traded on the NYSE. In 1965, to expand its operations, the company purchased water properties owned by Southern Gas & Water Company (West Virginia). In 1970, it consolidated 12 operating companies in New Jersey to create the New Jersey Water Company. In 2003, the company was acquired by the Germany-based stock corporation RWE Aktiengesellschaft (RWE). In April 2008, RWE Aqua Holdings GmbH, a wholly owned subsidiary of RWE (and at the time the sole owner of the company's common stock), divested part of its stake through an initial public offering on the NYSE. By 2009, RWE had disposed of its remaining interests through similar transactions.

Since 2012, American Water has divested its regulated businesses where regulatory jurisdictions were challenging, and instead acquired assets in areas where regulations have proved more supportive. In 2012, it sold all its water and wastewater companies in Arizona and New Mexico, as well as eight water systems and one wastewater system in Ohio. During that period, it acquired 10 regulated water and wastewater systems for USD44.6 million, including seven regulated water systems in New York. In 2013, the company's regulated businesses acquired 10 water systems and five wastewater systems (including the regulated wastewater utility company Dale Service Corporation in November 2013) for approximately USD23.7 million. More recently, in 2014, American Water completed 13 acquisitions of various regulated water and wastewater systems for a total purchase price of USD8.9 million. During the same year, the company exited its Class B biosolids¹ business (which provided biosolids management, transport and disposal services to municipal and industrial customers in Ontario, Canada) through the sale of its subsidiary Terratec Environmental Ltd.

In 2015, American Water bought a 95% stake in Water Solutions Holdings, LLC, the parent company of Keystone Clearwater Solutions, LLC, for USD133 million. During the same year, it purchased 14 regulated water and wastewater systems for USD64 million.

As of 31 December 2015, American Water operated mainly through the Regulated Businesses segment. The company also operates the Market-Based Businesses segment, which also includes four operating segments and provides extensive related and complementary water and wastewater services.

Regulated Businesses: Accounting for 86.3%² of the company's revenue in 2015, this segment operated through 16 utility subsidiaries, providing water and wastewater utility services to households, companies and public authorities in approximately 1,600 communities across 16 US states, as of 31 December 2015. It also provides water to private fire hydrants and other water utilities for resale. In 2015, this segment provided water services to 2.8 million residential customers (176.0 billion gallons of water), 218,798 commercial customers (81.8 billion gallons), 3,765 industrial customers (39.0 billion gallons) and 60,421 public and other customers (51.3 billion gallons). Also in 2015, it delivered wastewater services to 132,870 residential customers, 7,308 commercial customers, 17 industrial customers and 342 public and other customers. As of 31 December 2015, it owned and operated 81 surface water and 500 groundwater

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

¹ Biosolids are a residual product of wastewater treatment.

² Throughout this section, such percentages have been calculated excluding "Other".

treatment plants, 1,100 groundwater wells, 100 wastewater treatment facilities, 1,200 treated water storage facilities, 1,400 pumping stations, 81 dams and 49,000 miles of water mains and collection pipes. Its key competitors include government agencies and publicly owned utilities, such as Aqua America Inc., United Water, American States Water Co. and California Water Services Group.

Market-Based Businesses: Accounting for 13.7% of the company's revenue in 2015, this segment includes various businesses that provide market-based water and wastewater products and services. It operates through the following four business lines (which individually do not meet the criteria of a reportable segment):

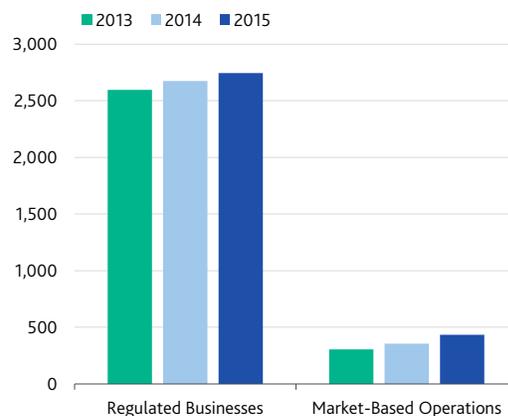

- » **Contract Operations Group:** This business line designs, builds, operates and maintains water and wastewater facilities primarily for municipalities, the food and beverage industry and other customers. Its key competitors include Veolia Environnement, American States Water, Operations Management International, Inc. and Southwest Water Company.
- » **Homeowner Services Group:** This business line operates in partnership with various municipal authorities to protect households and small companies against the cost of interior and external water and sewer line repairs and interior electric line repairs. Its key competitors include HomeServe USA and Utility Service Partners, Inc. In 2014, the Homeowner Services Group expanded its water and sewer line protection programs in eight additional states. Furthermore, Orlando Utilities Commission appointed the business as the exclusive provider of its service line protection programs.
- » **Military Services Group:** This business line oversees the operation and maintenance of water and wastewater systems on various military bases under twelve 50-year contracts with the US Department of Defense, as of 31 December 2015.
- » **Keystone:** This business segment provides natural gas exploration and production companies with customized water sourcing, transfer services, pipeline construction, water and equipment hauling and water storage solutions. Its key competitors include Rockwater Energy Solutions, Select Energy Services and Fluid Delivery Solutions, LLC.

Management Strategy/Priorities

Strategically, American Water seeks to:

- » Improve service quality and maximize customer satisfaction, while maintaining a balance between the company's infrastructure investment needs and customer costs
- » Create a workplace environment that supports diversity in the workforce and strengthens the company's relationships with union-represented employees
- » Undertake capital expenditure of USD6.4 billion over the next five years, including USD5.5 billion to improve infrastructure in its Regulated Businesses segment. The company also plans to spend USD600 million on acquisitions in its Regulated Businesses segment and USD280 million to drive growth in its Market-Based Businesses segment.
- » Invest in safety measures for all employees, customers and the public. Most of the company's capital expenditure over the next few years will focus on lower-risk system improvements and the replacement of old infrastructure.
- » Maximize operational efficiency, technological innovation and environmental stewardship. American Water targets an operation and maintenance (O&M) efficiency ratio³ that does not exceed 34% by 2020.

Furthermore during 2016-20, the company aims to achieve earnings per share growth of 7%–10%.

Source: Company Reports (form 10-K Dec 2015, investor day presentation Dec 2015), Moody's research

³ The O&M efficiency ratio is calculated by dividing adjusted regulated O&M expense by adjusted regulated operating revenue.

American Water Works Company, Inc.

Update to credit analysis

Summary

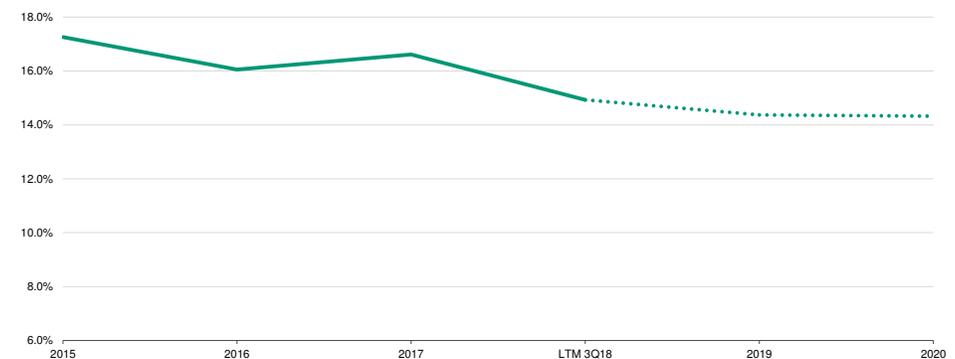

American Water Works Company, Inc.'s (American Water, or AWK) credit profile is supported by 1) its market position as the largest US investor-owned water utility holding company, 2) strong regulatory and operational diversity across 16 states, 3) improving regulatory support as more states adopt cost recovery trackers.

The company's credit is constrained by 1) increasing leverage due to financial policies that target over \$8.0 billion of capex, dividend growth approaching 10% and no planned equity issuances over the next five years, 2) cash flow pressures from federal tax reform and 3) structurally subordinated holding company debt that is about 25% of total consolidated debt, when including recent acquisition financing.

In the exhibit below, we show Moody's projection of American Water's funds from operations (FFO) to net debt ratio through 2020, based on our interpretation of the latest financial plan discussed at AWK's 2018 analyst day.

Exhibit 1

American Water's FFO to debt will continue to decline

Source: Moody's Investors Service and Moody's projection assumptions

Credit strengths

- » Diversity of holdings with 16 regulated water utilities
- » Supportive regulatory environments with timely cost recovery mechanisms
- » Support agreement at AWCC not a "guarantee" but provides sufficient credit substitution

Credit challenges

- » Financial metrics will weaken due to increasing leverage and cash flow leakage from tax reform
- » Financial policies evidence an increased risk tolerance
- » High capital spending and regulated acquisitions expected to continue

Rating outlook

American Water's negative outlook reflects financial metrics that will continue to decline over the next 12-18 months due to stagnant cash flow, debt-funded capex and increased holding company debt.

Factors that could lead to an upgrade

- » FFO to net debt metric at 20%, on a sustainable basis, while maintaining its current business risk profile
- » RCF to debt around 15%
- » Improved credit profiles of a majority of its operating subsidiaries

Factors that could lead to a downgrade

- » Less supportive regulatory provisions (especially in Pennsylvania or New Jersey)
- » Increased financial risk, such as stand-alone AWCC debt increasing toward 25% of consolidated debt or consolidated FFO to debt around 15% for a sustained period
- » Operational concerns such as water supply constraints or asset failure

Key indicators

Exhibit 2

American Water Works Company, Inc.

Profile

Headquartered in Camden, New Jersey, American Water Works Company, Inc. (AWK) is the largest investor-owned provider of water, wastewater and related services in North America, with operations serving an estimated 15 million people across 46 states and the District of Columbia in the US and a Canadian province. The company's regulated operations span across 16 states and account for around 86% of consolidated operating revenue. The exhibit below shows the relative contribution and growth of revenue from its core utility segment and unregulated operations.

Exhibit 3

The vast majority of American Water's operating revenue is derived from low-risk regulated utilities

Source: American Water Works, Inc.

American Water is a holding company and does not have any direct debt obligations; rather, it primarily issues debt through its non-operating financing subsidiary American Water Capital Corp, (AWCC) which has a support agreement with American Water.

Detailed credit considerations

Financial metrics will continue to decline

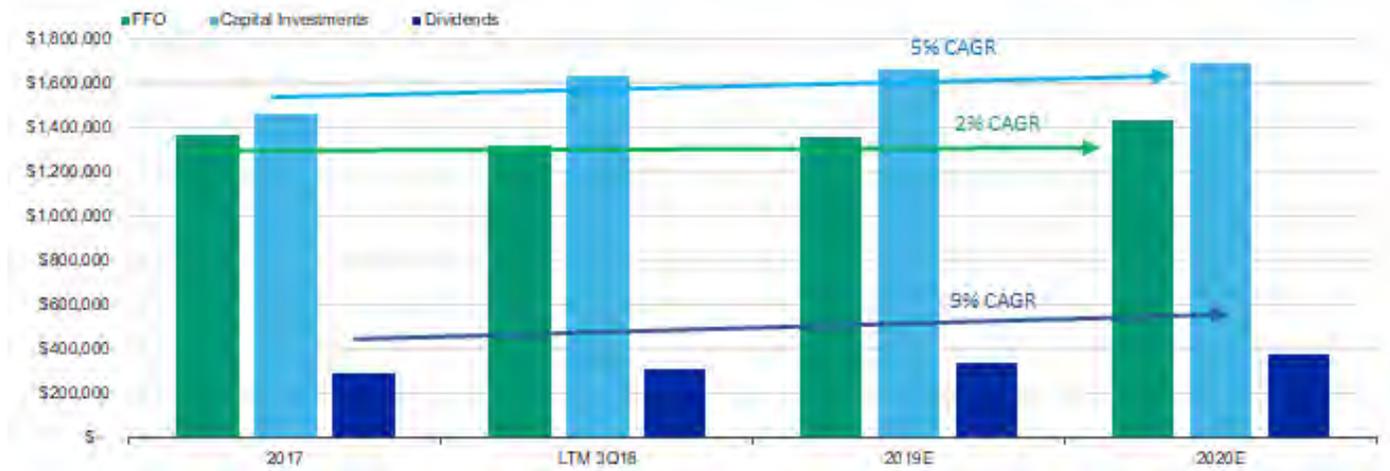

American Water's debt is expected to increase due to the financial policies in its 5-year plan. Through 2023, the company expects to spend \$8.0-\$8.6 billion in capex, provide dividend growth approaching 10% and issue no additional equity. We view these policies as evidencing a higher financial risk tolerance on the part of management, and we project funds from operations (FFO) to net debt ratios will continue to drop to 15% or below as a result.

With over \$8.0 billion in capex, we estimate that American Water's reported debt will be approaching \$12 billion by 2023 and will continue to outpace the growth of FFO. Similarly, we expect that a dividend growth rate approaching 10% will roughly triple the pace of FFO growth that we expect over this time. Exhibit 4 illustrates our expectations for FFO, capital spending and dividend compound annual growth rates (CAGR) from 2017 to 2020.

Exhibit 4

Capital spending and dividend growth will outpace cash flow growth through 2020

Comparison of compound annual growth rate (CAGR) for FFO, capital investments and dividends

Source: Moody's Investors Service

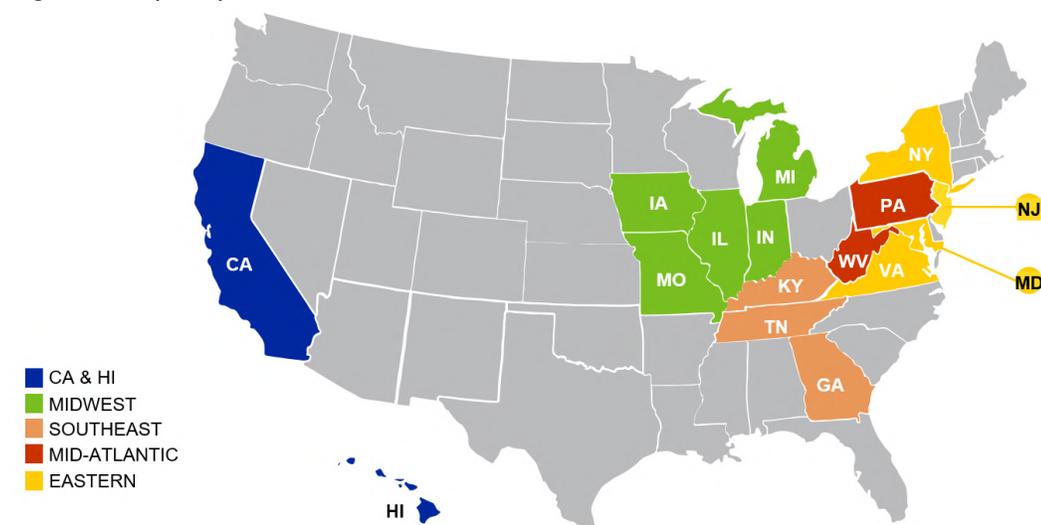

We expect cash flow growth to remain relatively sluggish, despite the company's 7-8% rate base CAGR (2017-2023) guidance, due to the near-term effects of tax reform, which will reduce deferred tax generation and result in customer refunds for excess deferred tax collections in previous years. The combination of these two factors will mitigate some of the cash benefits the company would otherwise receive from rider mechanism cost recovery and general rate cases.

Broad utility diversity and improving regulatory support

AWK is a holding company with around 85% of its expected revenue to be generated by low-risk water utility companies spanning 16 states. AWK's credit strength reflects its size, the scale of this diversity, along with the monopoly characteristics of water utilities that offer stable and predictable cost recovery and cash flow coverage of debt and interest.

Exhibit 5

Regulated footprint spans 16 states

Source: American Water 2018 Investor Day Presentation

Over the past several years, we have observed improving regulatory trends in the US, which include the increased prevalence of automatic cost recovery provisions such as revenue decoupling and infrastructure replacement mechanisms, as well as the willingness to adopt more forward-looking test year data in rate making. This trend has helped to expedite cost recovery (and reduce regulatory lag) and improve fixed cost recovery across AWK's various utility service territories.

One of the more significant cost recovery features is the ability to make discrete rate filings in order to recover the costs of replacing aging infrastructure. Often called distribution system improvement charges (DSIC), these mechanisms provide AWK with timely recovery of capital expenditures on an ongoing basis. Another important cost recovery feature is the use of declining usage adjustments (or "decoupling mechanisms" that target a specific gross profit needed to cover fixed operating costs, regardless of the volume of water sold) which are available in the rates of nine states, including AWK's six largest jurisdictions.

The exhibit below provides detail around some of the more important cost recovery features that are allowed in states that American Water serves.

Exhibit 6

Credit supportive cost recovery mechanisms exist in many of the states that American Water serves

| Cost Recovery Feature | States In-Use |
|----------------------------|--|
| Future Test Year | CA, HI, IL, IN, KY, NY, PA, TN, VA |
| Infrastructure Replacement | IA, IL, IN, MO, NJ, NY, PA, TN, VA, WV |
| Plant Recovery Mechanisms | CA, IL, KY, NY, PA, TN, VA |
| Decoupling | CA, IL, NY |

Recovery feature names are per Moody's description
Source: American Water 10K, Moody's

Low carbon transition risk, with diversity key to mitigating the impact of environmental risks

As a regulated water utility holding company, AWK has a low carbon transition risk within the utility sector, especially when compared to electric and gas utility peers. However, the company is not immune to climate change risks, which are generally highest for the sector in terms of supply variability and exposure to natural and man-made disasters, including flooding and soil/water pollution. These and other severe weather conditions could disrupt operations, change water usage patterns and have negative financial impacts on the company.

As seen in Exhibit 5, AWK's broad geographic footprint helps to mitigate the consolidated company's exposure to acute climate events, such as drought conditions which have significantly affected the state of California in recent years and past storms like Hurricane Sandy that impacted its service territories on the East Coast in 2012 and a devastating tornado in Joplin, Missouri in 2011.

Despite these events, that have had varying degrees of impact, AWK's consolidated financial and operational performance has remained stable throughout, due in part to its size and diversity.

Market-based business exposure is growing as a percent of income

Unregulated operations are higher risk versus regulated utility operations, since they depend on market prices for cost recovery and are subject to greater competition. However, AWK's unregulated exposure is generally in-line with corporate risk parameters since sales are derived from contracted services (albeit only 2-3 year average contract tenors) that typically generate free cash flow.

The past year has been a relatively active year for AWK's unregulated businesses, including 1) the \$365 million acquisition of Pivotal Home Solutions, which almost doubled the amount of customers serviced by AWK's Homeowner Services Group, 2) the exit of certain business lines (i.e., pipe construction and water trucking) within its higher-risk Keystone Clearwater Solutions, LLC segment and an associated \$54 million impairment and 3) the sale of 22 of 33 contracts within its Contracted Operations Group (i.e., contracts to operate the water and wastewater assets were sold to Veolia Environment S.A. for \$27 million). The pairing down of unregulated operations - and specifically the exposure to Keystone - is credit positive.

The acquisition of Pivotal is credit negative since it will result in a net increase in balance sheet exposure to unregulated operations. For example, the acquisition will add around \$180 million of debt that is not supported by utility rates and the contribution of unregulated operations is expected to grow to around 14% of consolidated net income by 2023, up from around 9% in 2017.

AWK's Military Base Operations are the lowest risk of these operations, since they are usually 50 year water and wastewater service contracts with the US government and offer a stable and predictable source of revenue and cash flow.

Liquidity analysis

American Water's liquidity is adequate when considering its access to external sources. Internal FFO of about \$1.4 billion per annum will lag the pace of capital spending (around \$1.65 billion per year) and growing dividends (\$311 million through LTM 3Q18). As a result, the roughly \$600 million of negative free cash flow we expect in 2019 will be supplemented through a bank credit facility.

External liquidity is managed through its financing subsidiary, AWCC, which last March increased the size of its revolver to \$2.25 billion, from \$1.75 billion, and extended its expiration date to March 2023 from June 2020. This credit facility provides support to the company's commercial paper program (CP) program which also increased in March 2018 to \$2.1 billion from \$1.6 billion, and can support up to \$150 million in letters of credit. Although there are no restrictions on revolver borrowings related to CP outstanding, we expect the company to leave ample cushion under the revolver to effectively backstop any CP borrowings. The facility has same-day drawing availability and no ongoing material adverse change clause. The lone financial covenant is a maximum debt to capitalization ratio of 70%. As of 30 September 2018, the company's ratio was in compliance at 59%.

At 30 September 2018, \$88 million in letters of credit and \$564 million of commercial paper was outstanding, leaving around \$2.16 billion available under the facility.

In August 2018, AWCC issued \$1.325 billion of senior notes. This issuance included the sale of \$625 million at 3.75% due in 2028 and \$700 million at 4.20% due in 2048. AWCC used the resulting proceeds to fund American Water and its regulated operating subsidiaries, repay \$191 million of notes due December 2018, and prepay \$100 million due in each 2019 and 2022.

AWCC has no material long-term maturities till 2021, when \$304 million are due. AWCC's next debt obligations are \$49.5 million senior unsecured bonds due in May 2019.

Structural considerations

AWK has approximately \$7.8 billion of consolidated reported long-term debt, roughly \$6.5 billion of which was issued at AWCC. The majority of AWCC's debt (approximately \$4.5 billion) has been advanced via inter-company notes to various regulated utility subsidiaries and is part of their respective regulated capital structures. Since this intercompany debt receives regulatory approved cost recovery, we do not consider this as true "holding company" debt that depends on upstream dividends for interest and principal payments. In total, we estimate that non-utility debt is around 25% of AWK's consolidated debt outstanding.

The nearly \$183 million of debt issued to fund the Pivotal acquisition in 2018 can also be viewed in one of two ways. Because Pivotal's assets are unlevered, the cash flow generated by this business can be considered as a source of debt service for the \$183 million of debt issued by AWCC as part of acquisition financing; however, since the debt is not the direct or legal obligation of Pivotal's assets, we sensitize our capital structure calculations to include this debt as part of the parent, as well.

AWCC, a Delaware corporation, is the wholly-owned finance subsidiary of American Water, whose purpose is to streamline the financing function, create cash management efficiencies, and often obtain a lower cost of capital for American Water's regulated water utility subsidiaries. The source of upstream debt service funding comes from the regulated utility operations, which make cash principal and interest payments directly to AWCC. We expect any additional up-streamed cash flows, in the form of dividends to AWK, will be limited to maintain the respective regulatory allowed equity capitalization for each utility (generally around 50%).

AWCC's A3 senior unsecured rating is the same as its parent, American Water, which provides credit enhancement through a support agreement between American Water and AWCC. The features contained in the support agreement that support Moody's view of credit substitution include: 1) no termination of the support agreement until all debt shall have been irrevocably paid in full, without all lenders' (including debt trustees) consent, 2) American Water has agreed to make timely payment of interest, principal or premium on any debt issued by AWCC, if AWCC is unable to make such payments 3) the aforementioned payment is in the form of cash or

liquid assets and not merely collection, 4) American Water waives any claims related to a failure or delay by AWCC in enforcing its rights under the support agreement, 5) the support agreement is binding on any successors of American Water, 6) the lender may proceed directly against American Water to obtain payment of defaulted interest, principle or premium, and 7) any changes to the support agreement that adversely affect lenders must be approved by such parties. Furthermore, American Water has committed to own, during the term of the support agreement, all of the voting stock of AWCC and to ensure that a positive tangible net worth at AWCC will be maintained at all times. The support agreement is governed by the laws of the state of New York, which we view to be hospitable to the enforcement of guarantees.

Although the support agreement has many attributes of what a guarantee provides, we note that it is not specifically or legally considered a guarantee. Also, debt at AWCC does not benefit from any explicit upstream guarantees from the regulated utility subsidiaries nor does the debt obligations of the subsidiaries benefit from any explicit downstream guarantee from American Water or AWCC. Nevertheless, given the agreement's stated protections, and that a significant amount of AWCC's debt has been incurred to finance rate base, we effectively view the support agreement structure as being similar to a guarantee in our credit analysis and have made no notching differentiation between the two entities.

American Water Works Company, Inc.

Update following negative outlook

Summary

American Water Work Company, Inc.'s (American Water, or AWK, A3 negative) credit profile is supported by 1) its market position as the largest US investor-owned water utility holding company, 2) strong regulatory and operational diversity across 16 states, 3) improving regulatory support as more states adopt cost recovery trackers.

The company's credit is constrained by 1) increasing leverage due to financial policies that target over \$8.0 billion of capex, dividend growth approaching 10% and no planned equity issuances over the next five years, 2) a new tax law that will result in cash flow leakage and 3) subordinated holding company debt that is about 23% of total consolidated debt.

In the exhibit below, we show four Moody's projection scenarios for American Water's funds from operations (FFO) to net debt ratio. The analysis compares our view of cash flow production "before tax reform" (BTR) and "after tax reform" (ATR), using assumptions based upon our interpretation of American Water's five year guidance drivers, as a base case, and a downside scenario that cuts earnings growth in half. While we do not currently view AWK's credit profile according to the downside scenario, it is a sensitivity analysis that attempts to capture the possibility for unforeseen developments, such as lower growth, regulatory challenges, higher than expected outflows from tax reform, underperformance of unregulated operations, etc. Other assumptions behind these scenarios are noted in the footnote below.

Exhibit 1

Our FFO to net debt expectations, for AWK, are now lower as a result of tax reform FFO to net debt

All scenarios include: 10% dividend growth; 100% debt financing of negative free cash flow; 2% cash tax rate.

The "Base" scenario and "Downside" scenario reflect consolidated net income CAGRs of 9.0% and 4.5%, respectively. The CAGRs are based off of LTM 3Q17 figures.

BTR assumed a 40% effective tax rate 2018-2022, ATR assumed a 25% effective tax rate 2018-2022.

Source: American Water Works, Inc. SEC filings, Moody's Investors Service projection assumptions

Credit strengths

- » Diversity of holdings with 16 regulated water utilities
- » Supportive regulatory environments with timely recovery mechanisms
- » Support agreement at AWCC not a "guarantee" but provides sufficient credit substitution

Credit challenges

- » Financial metrics will weaken due to increasing leverage and cash flow leakage
- » Financial policies evidence an increased risk tolerance
- » High capital expenditures and more sizeable regulated acquisitions will continue

Rating outlook

American Water's negative outlook reflects financial metrics that had been expected to decline due to debt-funded growth and now a trajectory that will decline further due to Federal tax reform. We expect FFO to net debt metrics to decline to around 15% over the next 12-18 months.

American Water's credit profile could be maintained if FFO to net debt and RCF to net debt were to stabilize around 16% and 11%, respectively, and without an increase in parent debt levels (currently at approaching 25% of consolidated debt).

Factors that could lead to an upgrade

- » FFO to net debt metrics at 20%, on a sustainable basis, while maintaining its current business risk profile
- » RCF to debt around 15%
- » Improved credit profiles of a majority of its operating subsidiaries

Factors that could lead to a downgrade

- » Less supportive regulatory provisions (especially in Pennsylvania or New Jersey)
- » Increased financial risk, such as the stand-alone AWCC debt increasing toward 25% of consolidated debt or consolidated FFO to debt around 15% for a sustained period.
- » Operational concerns such as supply or asset failure

Profile

Headquartered in Voorhees, New Jersey, American Water Works Company, Inc. is the largest investor-owned provider of water, wastewater and related services in North America, with operations serving an estimated 15 million people across 46 states and the District of Columbia in the US and a Canadian province. The company's regulated operations span across 16 states and accounts for just under 90% of consolidated operating revenue. The exhibit below shows the relative contribution and growth of revenue from its core utility segment and unregulated operations.

Exhibit 3

The vast majority of American Water's operating revenue is derived from low-risk regulated utilities

Source: American Water Works Company, Inc. 2016 10K

American Water is a holding company and does not have any direct debt obligations; rather, it primarily issues debt through its non-operating financing subsidiary American Water Capital Corp, which has a support agreement with American Water.

Detailed credit considerations

Financial metric decline will continue due to debt-funded growth and increasing dividend

American Water's debt is expected to increase due to the financial policies in its 5-year plan. Through 2022, the company expects to spend \$8.0-\$8.6 billion in capex, provide dividend growth approaching 10% and issue no additional equity. We view these policies as management evidencing a higher financial risk tolerance, and we project funds from operations (FFO) to net debt ratios will continue to drop from the 18% posted in 2014 (17% through LTM 3Q17) to a sustainable 16%, as a result.

With over \$8.0 billion in capex, we estimate that American Water's reported debt will be around \$10 billion by 2022 and will continue to outpace the growth of FFO. Similarly, we expect that a dividend growth rate approaching 10% will also roughly double the pace of FFO growth that we expect over this time.

Cash leakage from tax reform will further pressure financial ratios

We see tax reform as having a negative credit impact due to cash leakage resulting from a lower tax rate, which will reduce deferred tax contribution to cash flow, and customer refunds from excess deferred tax liabilities. We estimate that the deferred tax cash flow benefit will be cut in half as a result of the Federal tax rate move to 21% and that the excess liabilities will be returned to customers over time.

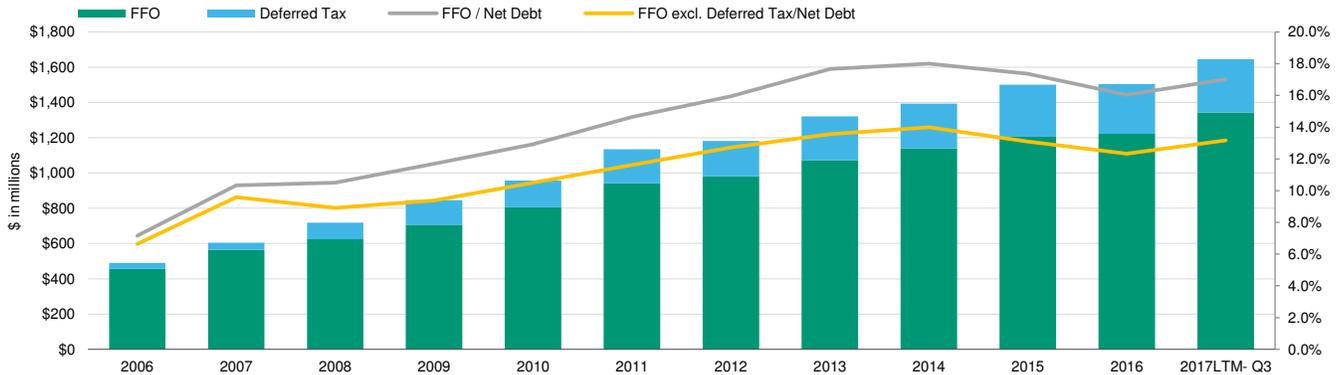

For American Water, we estimate that losing around \$150 million of cash flow to deferred taxes, will further pressure FFO to debt to around 15% over the next several years. 15% is a level that we have highlighted as potentially impacting the credit profile of American Water. In the two exhibits below

Over the past 10 years, American Water, like most of the utility sector, has benefitted from various tax offsets that have kept cash tax payments low. Federal policies, like bonus depreciation, has resulted in a significant amount of temporary tax savings, resulting in higher increased deferred tax balances.

The impacts from bonus depreciation and other tax policies have provided significant boosts to cash flow, as seen in the exhibit below. For American Water, the deferred tax contribution to FFO has grown from a negligible amount in 2006, to around 23% through LTM 3Q17.

Exhibit 4

Deferred Tax has become a large boost to American Water's cash flow in recent years.

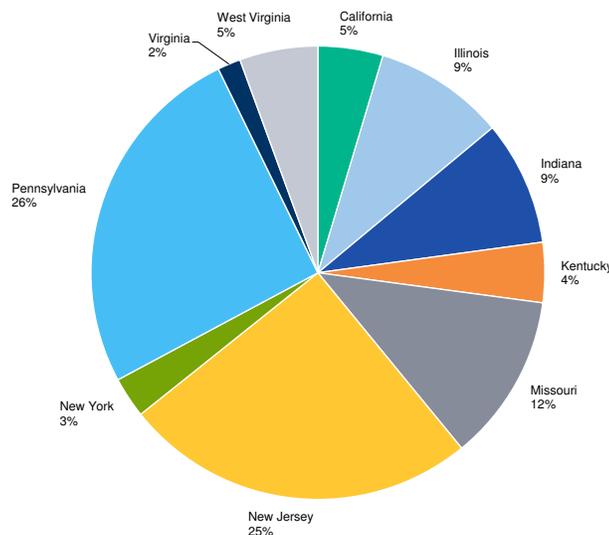

Source: American Water Works, Inc. financial statements, Moody's Financial Metrics

Broad utility diversity and improving regulatory support

AWK is a holding company with around 87% of its revenue produced by low-risk water utility companies, spanning 16 states. AWK's credit strength reflects the size, scale of this diversity, along with the monopoly service characteristics of water utilities that offer stable and predictable cost recovery and cash flow coverage of debt and interest.

Exhibit 5

American Water has a very diverse asset base, with utility operations in 16 different states.

Source: American Water Works Company, Inc. 2016 10K

Over the past several years, we have observed improving regulatory trends in the US, which include the increased prevalence of automatic cost recovery provisions such as revenue decoupling and infrastructure replacement mechanisms, as well as the willingness to adopt more forward-looking test year data in rate making. This trend has helped to expedite cost recovery (and reduce regulatory lag) and improve fixed cost recovery across AWK's various utility service territories.

One of the more significant cost recovery features is the ability to make discrete rate filings in order to recover the costs of replacing aging infrastructure. Often called distribution system improvement charges (DSIC), these mechanisms provide AWK timely recovery of capital expenditures on an ongoing basis. Another important cost recovery feature is the use of declining usage adjustments (or "decoupling mechanisms" that target a specific gross profit needed to cover fixed operating costs, regardless of the volume of water sold) which are available in the rates of nine state, including AWK's six largest jurisdictions.

The exhibit below provides detail around some of the more important cost recovery features that are allowed in states that American Water serves.

Exhibit 6

Credit supportive cost recovery mechanisms exist in many of the states that American Water serves.

| Cost Recovery Feature | States In-Use |
|----------------------------|------------------------------------|
| Future Test Year | CA, HI, IL, IN, KY, NY, PA, TN, VA |
| Infrastructure Replacement | IL, IN, MO, NJ, NY, PA, TN, WV |
| Plant Recovery Mechanisms | CA, IL, KY, NY, PA, TN, VA |
| Decoupling | CA, IL, NY |

Recovery feature names are per Moody's description
Source: American Water 10K, Moody's

The broad improvement in regulatory cost recovery, across all jurisdictions, has allowed AWK and AWCC ratings to overcome the limited structural subordination that exists at its operating companies, and has resulted in a ratings level on-par with its largest subsidiaries: New Jersey American Water (NJ-AWC A3 stable) and Pennsylvania American Water (PAWC A3 stable).

Most unregulated businesses are utility-like and relatively small

Non-regulated operations are generally higher risk versus utility operations, since they depend on market prices for cost recovery and are subject to greater competition; however, AWK's contracted services (e.g., O&M agreements with municipalities) or homeowner services activities are within the core competencies of water system operations. In fact, once contracts are obtained for military base operations, they offer a stable and predictable source of revenue and cash flow for 50 years. Therefore, we do not view these business lines as negatively impacting the overall credit of AWK. Furthermore, these segments have not, to date, required a significant amount of capital or reliance on credit support from the parent.

Similarly, the company's growing homeowner services and a contract services groups operate and maintains water and wastewater facilities for residential, municipal and corporate customers. These contracts are of shorter duration, but are not viewed as high risk.

On the other hand, we view the company's ownership of Keystone Clearwater Solutions (Keystone; unrated - a provider of water services to support hydraulic fractionation of shale gas plays) as higher risk, since the revenue is more volume based, short-term and derived from a speculative credit grade Exploration and Production (E&P) industry that bases decisions on commodity prices. Furthermore, we think there is reputational risks that AWK takes on, as they intermingle operations with E&P companies that carry a higher level of environmental exposure.

Despite these negatives, Keystone is very small compared to AWK and has little bearing on the company's credit profile. Should more of AWK's unregulated investments carry this type of risk profile, or grow to be a meaningful portion of the business (i.e. above 15% of operations), AWK's credit would be negatively affected.

Liquidity analysis

American Water's liquidity is managed through its financing subsidiary, AWCC, which extended its \$1.75 billion credit facility to expire in June 2020. This credit facility provides support to the company's \$1.6 billion commercial paper (CP) program (P-2). Although there are no restrictions for revolver borrowings, related to CP outstanding, we expect the company to leave ample cushion under the revolver to effectively backstop any CP borrowings. The facility has same-day drawing availability and no ongoing material adverse change clause. The lone financial covenant is maximum debt to capitalization ratio of 70%. As of 30 September 2017, the company's ratio was in compliance at 58%.

At 30 September 2017, \$86 million in letters of credit outstanding and \$103 million of commercial paper outstanding, leaving around \$1.56 billion available under the facility.

In August 2017, AWCC issued \$600 million 2.95% Senior Notes due 2027 and \$750 million of 3.75% Senior Notes due 2047. The use of proceeds is to (1) repay \$524 million of AWCC notes upon maturity in October 2017; (2) prepay \$138 million of 5.62% AWCC debt due December 2018 and \$181 million aggregate principal of 5.77% AWCC notes due December 2021; and (3) repay AWCC's CP obligations and for general corporate purposes.

The next material long-term debt maturities for American Water include AWCC obligations of \$110 million due in May of 2018 and \$191 million due in December of 2018.

Structural considerations

Following the aforementioned debt issuance in August 2017, AWK has approximately \$7.4 billion of consolidated reported long-term debt, roughly \$6.0 billion of which was issued at AWCC. The majority of AWCC's debt (approximately \$4.0 billion) has been advanced via inter-company notes to various regulated utility subsidiaries and is part of their respective regulated capital structures. We estimate that about \$2.0 billion of AWCC obligations are strictly holding company debt, which we view to be subordinate to the debt which supports the operating companies, since it only has utility dividend distributions as cash sources available for its debt service. Negative credit implications would ensue for AWCC and American Water if the holding company debt to consolidated debt ratio (currently at about 23%) grows to around 25%.

AWCC, a Delaware corporation, is the wholly-owned finance subsidiary of American Water, whose purpose is to streamline the financing function, create cash management efficiencies, and often obtain lower the cost of capital for American Water's regulated water utility subsidiaries. The source of upstream debt service funding comes from the regulated utility operations, which make cash principal and interest payments directly to AWCC. We expect any additional up-streamed cash flows, in the form of dividends to AWK, will be limited to maintain the respective regulatory allowed equity capitalization for each utility (generally around 50%).

AWCC's A3 senior unsecured rating is equalized with its parent, American Water, which provides credit enhancement through a support agreement between American Water and AWCC. The features contained in the support agreement, that support Moody's view of credit substitution include: 1) no termination of the support agreement until all debt shall have been irrevocably paid in full, without all lenders' (including debt trustees) consent, 2) American Water has agreed to make timely payment of interest, principal or premium on any debt issued by AWCC, if AWCC is unable to make such payments 3) the aforementioned payment is in the form of cash or liquid assets and not merely collection, 4) American Water waives any claims related to a failure or delay by AWCC in enforcing its rights under the support agreement, 5) the support agreement is binding on any successors of American Water, 6) the lender may proceed directly against American Water to obtain payment of defaulted interest, principle or premium, and 7) any changes to the support agreement that adversely affect lenders must be approved by such parties. Furthermore, American Water has committed to own, during the term of the support agreement, all of the voting stock of AWCC and to ensure that a positive tangible net worth at AWCC will be maintained at all times and the support agreement is governed by the laws of the state of New York, which we view to be hospitable to the enforcement of guarantees.

Although the support agreement has many attributes of what a guarantee provides, we note that it is not specifically or legally considered a guarantee. Also, debt at AWCC does not benefit from any explicit upstream guarantees from the regulated utility subsidiaries nor does the debt obligations of the subsidiaries benefit from any explicit downstream guarantee from American Water or AWCC. Nevertheless, given the agreement's stated protections, and that a significant amount of AWCC's debt has been incurred to finance rate base, we effectively view the support agreement structure as being similar to a guarantee for rating purposes and have made no notching differentiation between the two entities.

American Water Works Company, Inc.

Largest US Investor-Owned Water Company

Summary Rating Rationale

American Water Works Inc.'s (AWK or American Water) A3 Issuer Rating reflects its portfolio of low risk, regulated utility operating subsidiaries with good geographical and regulatory diversity across 16 US states. The rating also reflects a consistent financial profile, underpinned by strong regulatory support and cost recovery provisions in most jurisdictions, which will help to support a capital plan of over \$1 billion per annum through 2020. AWK's continued need for capital markets financing is likely to be executed at the American Water Capital Corp. (AWCC, A3 stable) entity level.

AWK has approximately \$6.0 billion of consolidated reported long-term debt, roughly \$4.5 billion of which was issued at AWCC. The majority of AWCC's debt has been advanced via inter-company notes to various regulated utility subsidiaries. We estimate that there is slightly over \$1.0 billion of strictly holding company debt, which we view to be subordinate to the debt which supports the operating companies, since it only has utility dividend distributions as cash sources available for its debt service.

Exhibit 1

Source: Moody's Investors Service

Credit Strengths

- » Diversified holding company of 16 regulated water utilities, a credit positive
- » Supportive regulatory environments with timely recovery mechanisms
- » Support agreement at AWCC not a "guarantee" but provides sufficient credit substitution

Credit Challenges

- » Highly capital intensive industry with old asset base
- » Primarily debt-funded growth
- » Continues to target unregulated investment, albeit at a slower pace than regulated growth

Rating Outlook

The stable rating outlook for AWK and AWCC reflects our expectation for consolidated FFO to Net Debt to remain in the high-teens range on a sustained basis, with continued regulatory support of costs and investment. We also expect that unregulated operations will remain around 15% of consolidated operations.

Factors that Could Lead to an Upgrade

The ratings for AWK and AWCC could be upgraded if FFO to Net Debt metrics were to remain over 20%, on a sustainable basis, and while maintaining its current business risk profile.

Factors that Could Lead to a Downgrade

AWK's ratings would be negatively impacted by less supportive regulatory provisions (especially in Pennsylvania or New Jersey), operational concerns such as supply or asset failure, or increasing leverage to the point that FFO to Net Debt declines to the low-teen's for an extended period.

Furthermore, if the impacts of drought conditions in California were unmitigated by regulatory support or if materially negative outcomes to litigation (e.g., in West Virginia) were to result in significant financial harm to AWK, or if unregulated exposure and business risk grew beyond our expectations, ratings could be pressured downward.

Detailed Rating Considerations

DIVERSIFIED UTILITY HOLDINGS AND STRONG REGULATORY SUPPORT

AWK is a holding company with around 88% of its revenue produced by low-risk water utility companies, spanning 16 states. AWK's credit strength reflects the size, scale of this diversity, along with the monopoly service characteristics of water utilities that offer stable and predictable cost recovery and cash flow coverage of debt and interest.

Over the past several years, we have observed improving regulatory trends in the US, which include the increased prevalence of automatic cost recovery provisions such as revenue decoupling and infrastructure replacement mechanisms. This trend has helped to expedite cost recovery (and reduce regulatory lag) and improve fixed cost recovery across AWK's various utility service territories.

One of the more significant cost recovery features is the ability to make discrete rate filings in order to recover the costs of replacing aging infrastructure. Often called distribution system improvement charges (DSIC), these mechanisms provide AWK timely recovery of capital expenditures on an ongoing basis. Another important cost recovery feature is the use of declining usage adjustments (or "decoupling mechanisms" that target a specific gross profit needed to cover fixed operating costs, regardless of the volume of water sold) which are available in the rates of nine state, including AWK's six largest jurisdictions.

The broad improvement in regulatory cost recovery, across all jurisdictions, has allowed AWK and AWCC ratings to overcome the limited structural subordination that exists at its operating companies, and has resulted in a ratings level on-par with its largest subsidiaries: New Jersey American Water (NJ-AWC; A3 stable) and Pennsylvania American Water (PA-AWC; A3 stable).

ACQUISITIONS HELP DRIVE GROWING RATE BASE

The regulatory provisions that AWK receives from its utility jurisdictions also extends to recent legislation that supports industry consolidation, including the recovery of acquisition premiums and single-tariff rates. These mechanisms provide incentive for AWK to make acquisitions, since the full cost of the acquisition can be recovered, while spreading the costs across a broader customer base. Since 2010 such legislation has passed in AWK states of operations, such as Pennsylvania, New Jersey, Missouri and Illinois, among others.

In 2016, alone, AWK has completed 10 acquisitions in 6 states that have added a total of 7,556 customers. 13 other acquisitions are currently pending. These acquisitions have helped to drive growth in AWK's rate base, which increased from \$9.4 billion in 2014 to \$10.5 billion in 2016, which the company expects to continue growing at a compound annual growth rate of approximately 5%.

We expect this trend, including larger M&A activity, to continue as a result of such legislation. For example, AWK's largest proposed acquisition, of late, is the \$195 million offer for the Scranton Sewer Authority (SSA, unrated). We see this as an opportunistic transaction, since Pennsylvania provides for both the recovery of acquisition premiums and socialized billing, as well as the ability for SSA to source funding which it can use to reduce debt obligations. We view this transaction as credit neutral for AWK due to its small size, and the benefits of an added wastewater revenue stream, but paid at a high price (i.e., 17.5x SSA's 2015 FYE EBITDA) with mostly debt.

STABLE FINANCIAL METRICS

AWK's FFO to Net Debt continues to hover around the 17% range - a level it has maintained over the past three years, aided by the cash impacts of bonus depreciation. However, with a growing dividend, the company's retained cash flow (RCF) to debt metric has steadily declined since 2013, from 15% to 13% as of LTM 2Q16 - a credit negative.

We expect that AWK's annual capex of over \$1.0 billion will be funded largely through cash flow from operations (e.g., Moody's adjusted CFO through LTM 2Q16 was about \$1.3 billion), leaving the need to debt finance its annual dividend which we expect to grow commensurate with the company's earnings growth targets of 7-10%. This will result in negative free cash flow of around

The debt-funded dividend is negative to the company's financial profile; however, with continued improvement in cost management and a relatively high degree of capex recovered quickly through special recovery mechanisms, we believe that AWK will be able to continue to produce FFO to Net Debt and RCF to Net Debt in the high teens range and low-teens range, respectively, over the next

few years. Both of these ranges are appropriate for a regulated water utility holding company with manageable holding company debt and limited exposure to unregulated businesses.

UNREGULATED GROWTH IS NEGATIVE, BUT SHOULD REMAIN SMALL

While non-regulated operations typically bring added credit risk versus utility holdings, we do view AWK's contracted services or homeowner services activities as negatively impacting the overall credit of AWK. We view these as related lines of business that have not, to date, required a significant amount of capital or reliance on credit support from the parent. Furthermore, once contracts are obtained for military base operations, they offer a stable and predictable source of revenue and cash flow for 50 years.

Similarly, the company's growing homeowner services and a contract services groups operate and maintains water and wastewater facilities for residential, municipal and corporate customers. These contracts are of shorter duration, but are not viewed as high risk.

On the other hand, we view the company's July 2015 acquisition of Keystone Clearwater Solutions (Keystone; unrated - a provider of water services to support hydraulic fractionation of shale gas plays) as higher risk, since the revenue is more volume based, short-term and derived from a speculative credit grade Exploration and Production (E&P) industry that bases decisions on commodity prices. The risks associated with Keystone's revenues became evident over the past twelve months, as several drillers have gone bankrupt and oil and gas production volumes have declined throughout the country. Moreover, we think there is reputational risks that AWK takes on, as they intermingle operations with E&P companies that carry a higher level of environmental exposure.

Keystone is very small compared to AWK and has little bearing on the company's credit profile. However, should more of AWK's unregulated investments carry this type of risk profile, or grow to be a meaningful portion of the business (i.e. above 15% of operations), AWK's credit would be negatively affected.

Liquidity Analysis

American Water's liquidity is managed through its financing subsidiary, AWCC, which extended its \$1.75 billion credit facility to expire in June 2020. This credit facility provides support to the company's \$1.6 billion commercial paper (CP) program (P-2). Although there are no restrictions for revolver borrowings, related to CP outstanding, we expect the company to leave ample cushion under the revolver to effectively backstop any CP borrowings. The facility has same-day drawing availability and no ongoing material adverse change clause. The lone financial covenant is maximum debt to capitalization ratio of 70%. As of June 30, 2016, the company's ratio was in compliance at 57%.

At June 30, 2016, \$89 million in letters of credit were outstanding and about \$950 million of commercial paper was outstanding, leaving around \$711 million available under the facility.

American Water's near-term debt maturities include around \$38 million due in December 2016, \$524 million in October 2017 and a Pennsylvania American Water Company, Inc. (PAWC, A3 stable) maturity of \$33 million in November 2017.

Structural Considerations

AWCC, a Delaware corporation, is the wholly-owned finance subsidiary of American Water, whose purpose is to streamline the financing function, create cash management efficiencies, and often obtain lower the cost of capital for American Water's regulated water utility subsidiaries. The source of upstream debt service funding comes from the regulated utility operations, which make cash principal and interest payments directly to AWCC. We estimate that over \$3.0 billion of AWCC's long-term debt has been advanced to several regulated utility subsidiaries via intercompany loans which is incorporated in their respective capital structures for rate-making purposes. We expect any additional up-streamed cash flows, in the form of dividends to AWK, will be limited to maintain the respective regulatory allowed equity capitalization for each utility (generally around 50%).

AWCC's A3 senior unsecured rating is equalized with its parent, American Water, which provides credit enhancement through a support agreement between American Water and AWCC. The features contained in the support agreement, that support Moody's view of credit substitution include: 1) no termination of the support agreement until all debt shall have been irrevocably paid in full, without all lenders' (including debt trustees) consent, 2) American Water has agreed to make timely payment of interest, principal or premium on any debt issued by AWCC, if AWCC is unable to make such payments 3) the aforementioned payment is in the form of cash or liquid assets and not merely collection, 4) American Water waives any claims related to a failure or delay by AWCC in enforcing

its rights under the support agreement, 5) the support agreement is binding on any successors of American Water, 6) the lender may proceed directly against American Water to obtain payment of defaulted interest, principle or premium, and 7) any changes to the support agreement that adversely affect lenders must be approved by such parties. Furthermore, American Water has committed to own, during the term of the support agreement, all of the voting stock of AWCC and to ensure that a positive tangible net worth at AWCC will be maintained at all times and the support agreement is governed by the laws of the state of New York, which we view to be hospitable to the enforcement of guarantees.

Although the support agreement has many attributes of what a guarantee provides, we note that it is not specifically or legally considered a guarantee. Also, debt at AWCC does not benefit from any explicit upstream guarantees from the regulated utility subsidiaries nor does the debt obligations of the subsidiaries benefit from any explicit downstream guarantee from American Water or AWCC. Nevertheless, given the agreement's stated protections, and that a significant amount of AWCC's debt has been incurred to finance rate base, we effectively view the support agreement structure as being similar to a guarantee for rating purposes and have made no notching differentiation between the two entities.

Profile

Headquartered in Voorhees, New Jersey, American Water Works Company, Inc. (American Water, or AWK), is the largest investor-owned provider of water, wastewater and related services in North America, with operations serving an estimated 15 million people across approximately 47 states in the US and a Canadian province. American Water is a holding company and does not have any direct debt obligations; rather, it primarily issues debt through its non-operating financing subsidiary American Water Capital Corp. (AWCC; A3 stable), which has a support agreement with American Water. AWK's regulated operations span across 16 states and accounts for just under 90% of consolidated revenue. Its operations in Pennsylvania and New Jersey represent approximately 42% of consolidated Revenue.

American Water Works Company, Inc.

Update to credit analysis

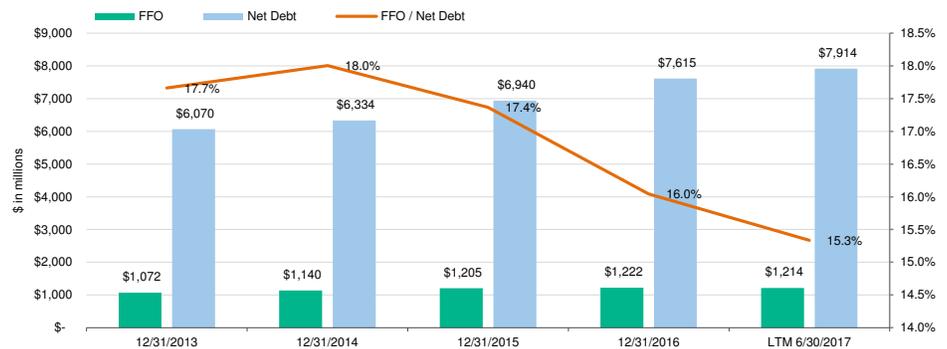

Summary

American Water Works Inc.'s (AWK or American Water) credit reflects (1) its portfolio of low-risk, regulated utility operating subsidiaries; (2) regulatory diversity across 16 US states; and (3) consistent cash flow production, underpinned by strong regulatory support and cost recovery provisions in most jurisdictions.

American Water's credit is constrained by (1) declining financial metrics; (2) around \$1.4 billion of holding company debt issued through American Water Capital Corp. (AWCC A3 stable - the financing vehicle for American Water); and (3) a debt-funded growth strategy.

Exhibit 1

Historical FFO, net debt and FFO to net debt

Source: Moody's Financial Metrics

Credit strengths

- » Diversity of holdings with 16 regulated water utilities
- » Supportive regulatory environments with timely recovery mechanisms
- » Support agreement at AWCC not a "guarantee" but provides sufficient credit substitution

Credit challenges

- » Financial metrics continue to weaken as debt and dividend growth outpaces cash flow
- » High capital expenditures and more sizeable regulated acquisitions will continue
- » Continues to target unregulated investment, albeit maintaining exposure to 15% of operations

Rating outlook

AWK's stable outlook reflects its sizeable asset base of utility operating companies that will outpace unregulated growth and maintain FFO to debt in the high teen's percent range over the next 12-18 months.

Factors that could lead to an upgrade

- » FFO to Net Debt metrics were at 20%, on a sustainable basis, while maintaining its current business risk profile.
- » RCF to debt around 15%.
- » Improved credit profiles of a majority of its operating subsidiaries.

Factors that Could Lead to a Downgrade

- » Less supportive regulatory provisions (especially in Pennsylvania or New Jersey).
- » Increased financial risk, such as the stand-alone AWCC debt increasing toward 25% of consolidated debt or consolidated FFO to debt around 15% for a sustained period.
- » Operational concerns such as supply or asset failure.

Profile

Headquartered in Voorhees, New Jersey, American Water Works Company, Inc. is the largest investor-owned provider of water, wastewater and related services in North America, with operations serving an estimated 15 million people across approximately 47 states in the US and a Canadian province. American Water is a holding company and does not have any direct debt obligations; rather, it primarily issues debt through its non-operating financing subsidiary American Water Capital Corp, which has a support agreement with American Water. AWK's regulated operations span across 16 states and accounts for just under 90% of consolidated revenue.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

Exhibit 3

The vast majority of American Water's operating revenue is derived from low-risk regulated utilities.

Source: American Water Works Company, Inc. 2016 10K

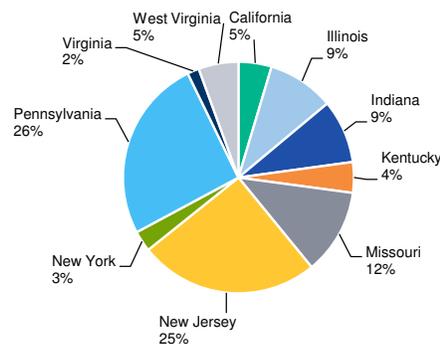

Detailed credit considerations

Broad utility diversity and improving regulatory support.

AWK is a holding company with around 87% of its revenue produced by low-risk water utility companies, spanning 16 states. AWK's credit strength reflects the size, scale of this diversity, along with the monopoly service characteristics of water utilities that offer stable and predictable cost recovery and cash flow coverage of debt and interest.

Exhibit 4

American Water has a very diverse asset base, with utility operations in 16 different states.

Source: American Water Works Company, Inc. 2016 10K

Over the past several years, we have observed improving regulatory trends in the US, which include the increased prevalence of automatic cost recovery provisions such as revenue decoupling and infrastructure replacement mechanisms, as well as the willingness to adopt more forward-looking test year data in rate making. This trend has helped to expedite cost recovery (and reduce regulatory lag) and improve fixed cost recovery across AWK's various utility service territories.

One of the more significant cost recovery features is the ability to make discrete rate filings in order to recover the costs of replacing aging infrastructure. Often called distribution system improvement charges (DSIC), these mechanisms provide AWK timely recovery of capital expenditures on an ongoing basis. Another important cost recovery feature is the use of declining usage adjustments (or "decoupling mechanisms" that target a specific gross profit needed to cover fixed operating costs, regardless of the volume of water sold) which are available in the rates of nine state, including AWK's six largest jurisdictions.

The exhibit below provides detail around some of the more important cost recovery features that are allowed in states that American Water serves.

Exhibit 5

Credit supportive cost recovery mechanisms exist in many of the states that American Water serves.

| Cost Recovery Feature | States In-Use |
|----------------------------|------------------------------------|
| Future Test Year | CA, HI, IL, IN, KY, NY, PA, TN, VA |
| Infrastructure Replacement | IL, IN, MO, NJ, NY, PA, TN, WV |
| Plant Recovery Mechanisms | CA, IL, KY, NY, PA, TN, VA |
| Decoupling | CA, IL, NY |

Recovery feature names are per Moody's description

Source: American Water 10K, Moody's

The broad improvement in regulatory cost recovery, across all jurisdictions, has allowed AWK and AWCC ratings to overcome the limited structural subordination that exists at its operating companies, and has resulted in a ratings level on-par with its largest subsidiaries: New Jersey American Water (NJ-AWC A3 stable) and Pennsylvania American Water (PAWC A3 stable).

Financial metrics declining amidst debt-funded growth

AWK's financial metrics have been on a steady decline over the past several years, as increasing capital investment has been funded primarily with debt. For example, the company's FFO to net debt was at a peak of 18% in 2014 and has declined each year to just over 15% through LTM 2Q17. Similarly, RCF to net debt has been on a steady downward trend since 2013, from over 15% to just under 12% as of LTM 2Q17.

These metric declines are due to growth opportunities that have had capex increase by a compound annual growth rate (CAGR) of over 12% from 2014 to LTM 2Q17. During that time, debt has increased by a CAGR of over 10% and dividends by nearly 9%. While the company's efforts toward cost control have been successful and the advancement of regulatory trackers are improving cost recovery, the nearly 8% of FFO growth since 2014, albeit robust, has not been enough to keep pace with the capex spend, nor the financial policies around leverage and dividends. During this time, underfunded pension obligations have also grown due to low interest and discount rates, exacerbating the financial decline in our standard adjusted metrics.

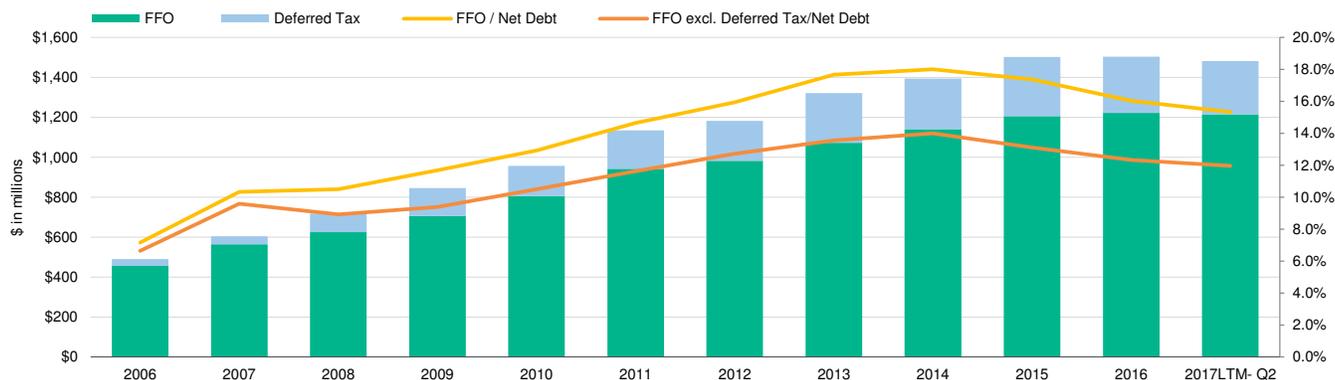

With a busy regulatory calendar, including a general rate case in one of its largest jurisdictions, Pennsylvania, we expect the company's cash flow to continue to grow and that management will manage its leverage and dividend policies to maintain FFO to net debt in the high teen's percent range and RCF to net debt well above 10% on a sustainable basis. If these financial thresholds are not met, AWK's credit profile would worsen.

Deferred tax benefits continue to boost cash flow

Over the past 10 years, American Water, like most of the utility sector, has benefitted from various tax offsets that have kept cash tax payments low. Federal policies, like bonus depreciation, has resulted in a significant amount of temporary tax savings, resulting in higher increased deferred tax balances.

The impacts from bonus depreciation and other tax policies have provided significant boosts to cash flow, as seen in the exhibit below. For American Water, the deferred tax contribution to FFO has grown from a negligible amount in 2006, to around 22% through LTM 2Q17.

Exhibit 6

Deferred Tax has become a large boost to American Water's cash flow in recent years.

Source: American Water Works, Inc. financial statements, Moody's

Deferred tax benefits are non-core sources of cash flow that could decline in future years, as tax policies change and cash tax payments become due. This represents an additional risk to the company, as excluding the deferred tax benefit results in LTM 2Q17 FFO to net debt of around 12%, which is more reflective of a mid-Baa type of financial profile.

Growing rate base through more sizeable system acquisitions

The regulatory provisions that AWK receives from its utility jurisdictions also extends to recent legislation that supports industry consolidation, including the recovery of acquisition premiums and single-tariff rates. These mechanisms provide incentive for AWK to make acquisitions, since the full cost of the acquisition can be recovered, while spreading the costs across a broader customer base. Since 2010 such legislation has passed in AWK states of operations, such as Pennsylvania, New Jersey, Missouri and Illinois, among others.

This, has lead to more sizeable acquisitions, in Pennsylvania in particular. The most notable are Pennsylvania American's 2016 acquisition of the Scranton Sewer Authority wastewater system (adding around 33,000 customers) and its pending acquisition of the City of McKeesport's wastewater system (roughly 22,000 customers). Exhibit 7 shows the current pending acquisitions for American Water.

Exhibit 7

American Water continues to growth through water and wastewater system acquirisors.**Pending Acquisitions**

| State | No. of Acquisitions | Water Customers | Wastewater Customers | Total Customers |
|---------------|---------------------|-----------------|----------------------|-----------------|
| California | 2 | 5,302 | | 5,302 |
| Illinois | 6 | 2,448 | 2,426 | 4,874 |

Source: American Water Works, Inc. second-quarter 2017 earnings presentation

We expect the trend of larger M&A activity, to continue. This will increase rate base and cash flow production, but the ultimate credit impact will depend upon the long-term financing of these transactions and continued support of regulatory and political officials. That is, if these transactions are highly levered or provoke customer and political intervention into cost recovery, it could undermine the credit benefit derived from the added cash flow.

Most unregulated businesses are utility-like and relatively small

Non-regulated operations are generally higher risk versus utility operations, since they depend on market prices for cost recovery and are subject to greater competition; however, AWK's contracted services (e.g., O&M agreements with municipalities) or homeowner services activities are within the core competencies of water system operations. In fact, once contracts are obtained for military base operations, they offer a stable and predictable source of revenue and cash flow for 50 years. Therefore, we do not view these business lines as negatively impacting the overall credit of AWK. Furthermore, these segments have not, to date, required a significant amount of capital or reliance on credit support from the parent.

Similarly, the company's growing homeowner services and a contract services groups operate and maintains water and wastewater facilities for residential, municipal and corporate customers. These contracts are of shorter duration, but are not viewed as high risk.

On the other hand, we view the company's ownership of Keystone Clearwater Solutions (Keystone; unrated - a provider of water services to support hydraulic fractionation of shale gas plays) as higher risk, since the revenue is more volume based, short-term and derived from a speculative credit grade Exploration and Production (E&P) industry that bases decisions on commodity prices. Furthermore, we think there is reputational risks that AWK takes on, as they intermingle operations with E&P companies that carry a higher level of environmental exposure.

Despite these negatives, Keystone is very small compared to AWK and has little bearing on the company's credit profile. Should more of AWK's unregulated investments carry this type of risk profile, or grow to be a meaningful portion of the business (i.e. above 15% of operations), AWK's credit would be negatively affected.

Liquidity Analysis

American Water's liquidity is managed through its financing subsidiary, AWCC, which extended its \$1.75 billion credit facility to expire in June 2020. This credit facility provides support to the company's \$1.6 billion commercial paper (CP) program (P-2). Although there are no restrictions for revolver borrowings, related to CP outstanding, we expect the company to leave ample cushion under the revolver to effectively backstop any CP borrowings. The facility has same-day drawing availability and no ongoing material adverse change clause. The lone financial covenant is maximum debt to capitalization ratio of 70%. As of June 30, 2017, the company's ratio was in compliance at 58%.

At June 30, 2017, \$86 million in letters of credit were outstanding and about \$1.1 billion of commercial paper was outstanding, leaving around \$650 million available under the facility.

In August 2017, AWCC issued \$600 million 2.95% Senior Notes due 2027 and \$750 million of 3.75% Senior Notes due 2047. The use of proceeds is to (1) repay \$524 million of AWCC notes upon maturity in October 2017; (2) prepay over \$138 million of 5.62% AWCC debt due December 2018 and over \$181 million aggregate principal of 5.77% AWCC notes due December 2021; and (3) repay AWCC's CP obligations and for general corporate purposes.

The next material long-term debt maturities for American Water include AWCC obligations of \$110 million due in May of 2018 and \$330 million due in December of 2018.

Structural Considerations

Following the aforementioned debt issuance in August 2017, AWK has approximately \$8.0 billion of consolidated reported long-term debt, roughly \$5.0 billion of which was issued at AWCC. The majority of AWCC's debt (approximately \$3.6 billion) has been advanced via inter-company notes to various regulated utility subsidiaries and is part of their respective regulated capital structures. We estimate that about \$1.4 billion of AWCC obligations are strictly holding company debt, which we view to be subordinate to the debt which supports the operating companies, since it only has utility dividend distributions as cash sources available for its debt service. Negative credit implications would ensue for AWCC and American Water if the holding company debt to consolidated debt ratio (currently at about 18%) grows to around 25%.

AWCC, a Delaware corporation, is the wholly-owned finance subsidiary of American Water, whose purpose is to streamline the financing function, create cash management efficiencies, and often obtain lower the cost of capital for American Water's regulated water utility subsidiaries. The source of upstream debt service funding comes from the regulated utility operations, which make cash

principal and interest payments directly to AWCC. We expect any additional up-streamed cash flows, in the form of dividends to AWK, will be limited to maintain the respective regulatory allowed equity capitalization for each utility (generally around 50%).

AWCC's A3 senior unsecured rating is equalized with its parent, American Water, which provides credit enhancement through a support agreement between American Water and AWCC. The features contained in the support agreement, that support Moody's view of credit substitution include: 1) no termination of the support agreement until all debt shall have been irrevocably paid in full, without all lenders' (including debt trustees) consent, 2) American Water has agreed to make timely payment of interest, principal or premium on any debt issued by AWCC, if AWCC is unable to make such payments 3) the aforementioned payment is in the form of cash or liquid assets and not merely collection, 4) American Water waives any claims related to a failure or delay by AWCC in enforcing its rights under the support agreement, 5) the support agreement is binding on any successors of American Water, 6) the lender may proceed directly against American Water to obtain payment of defaulted interest, principle or premium, and 7) any changes to the support agreement that adversely affect lenders must be approved by such parties. Furthermore, American Water has committed to own, during the term of the support agreement, all of the voting stock of AWCC and to ensure that a positive tangible net worth at AWCC will be maintained at all times and the support agreement is governed by the laws of the state of New York, which we view to be hospitable to the enforcement of guarantees.

Although the support agreement has many attributes of what a guarantee provides, we note that it is not specifically or legally considered a guarantee. Also, debt at AWCC does not benefit from any explicit upstream guarantees from the regulated utility subsidiaries nor does the debt obligations of the subsidiaries benefit from any explicit downstream guarantee from American Water or AWCC. Nevertheless, given the agreement's stated protections, and that a significant amount of AWCC's debt has been incurred to finance rate base, we effectively view the support agreement structure as being similar to a guarantee for rating purposes and have made no notching differentiation between the two entities.

American Water Works Company, Inc.

Key Facts and Statistics - FY Dec 2017

Company overview

American Water Works Company, Inc. (American Water) is a New Jersey-based holding company whose subsidiaries provide water-related and wastewater-related services.

As of 31 December 2017, American Water operated in 46 US states, the District of Columbia and Canada, serving approximately 15 million people. In the financial year ended 31 December 2017 (2017), it reported revenue of \$3.4 billion.

American Water originated in 1886 with the establishment of American Water Works & Guarantee Company. In 1935, it was renamed American Water Works Company, Inc. In 1947, it became publicly traded on the New York Stock Exchange (NYSE). Over 2003–08, the company was privately owned, but was relisted on the NYSE in 2008 through an initial public offering (ticker: AWK). As of 31 December 2017, the company's largest shareholder was The Vanguard Group, which owned 10.4% of its total share capital.

Business description

American Water is a holding company whose subsidiaries provide water-related and wastewater-related services to approximately 15 million people. It provides water and sewer line protection services to households and operates and maintains water and wastewater facilities for the US military, municipalities, and the food and beverage industry.

The company originated in 1886 with the establishment of American Water Works & Guarantee Company to build and acquire water systems in McKeesport, Pennsylvania. In 1935, it was renamed American Water, and in 1947 it became publicly traded on the NYSE. In 1965, to expand its operations, the company purchased water properties owned by Southern Gas & Water Company (West Virginia). In 1970, it consolidated 12 operating companies in New Jersey to create the New Jersey Water Company. In 2003, the company was acquired by the Germany-based stock corporation RWE Aktiengesellschaft (RWE). In April 2008, RWE Aqua Holdings GmbH, a wholly owned subsidiary of RWE (and at the time the sole owner of the company's common stock), divested part of its stake through an initial public offering on the NYSE. By 2009, RWE had disposed of its remaining interests through similar transactions.

Since 2012, American Water has divested its regulated businesses where regulatory jurisdictions were challenging, and instead acquired assets in areas where regulations have proved more supportive. In 2012, it sold all its water and wastewater companies in Arizona and New Mexico, as well as eight water systems and one wastewater system in Ohio. During that period, it acquired 10 regulated water and wastewater systems for \$44.6 million, including seven regulated water systems in New York. In 2013, the company's regulated businesses acquired 10 water systems and five wastewater systems (including the regulated wastewater utility company Dale Service Corporation in November 2013) for approximately \$23.7 million. In 2014, American Water completed 13 acquisitions of various regulated water and wastewater systems for a total purchase price of \$8.9 million. During the same year, the company exited its Class B biosolids¹ business (which provided biosolids management, transport and disposal services to municipal and industrial customers in Ontario, Canada) through the sale of its subsidiary Terratec Environmental Ltd.

In 2015, American Water bought a 95% stake in Water Solutions Holdings, LLC, the parent company of Keystone Clearwater Solutions, LLC, for \$133 million. During the same year, it purchased 14 regulated water and wastewater systems for \$64 million. In 2016, the company acquired 15 water and wastewater systems for \$199 million. Furthermore, in 2017, the company acquired 18 water and wastewater systems for \$210 million.

As of 31 December 2017, American Water operated mainly through the Regulated Businesses segment. The company also operates the Market-Based Businesses segment, which also includes four operating segments and provides extensive related and complementary water and wastewater services.

Regulated businesses: Accounting for 87.5%² of the company's revenue in 2017, this segment operated through 20 utility subsidiaries, providing water and wastewater utility services to households, companies and public authorities in approximately 1,600 communities across 16 US states, as of 31 December 2017. It also provides water to private fire hydrants and other water utilities for resale. In 2017, this segment provided water services to 2.9 million residential customers (174.4 billion gallons of water), 221,000 commercial customers (82.1 billion gallons), 4,000 industrial customers (39.4 billion gallons) and 63,000 public and other customers (51.3 billion gallons). Additionally, in 2017, it delivered wastewater services to 182,000 residential customers and 11,000 commercial customers. As of 31 December 2017, it owned and operated 72 surface water and approximately 527 groundwater treatment plants, 1,103 groundwater wells, 127 wastewater treatment facilities, 1,313 treated water storage facilities, 1,428 pumping stations, 80 dams and 50,382 miles of water mains and collection pipes. Its key competitors include government agencies and publicly owned utilities such as Aqua America Inc., Suez North America, American States Water Company and California Water Services Group.

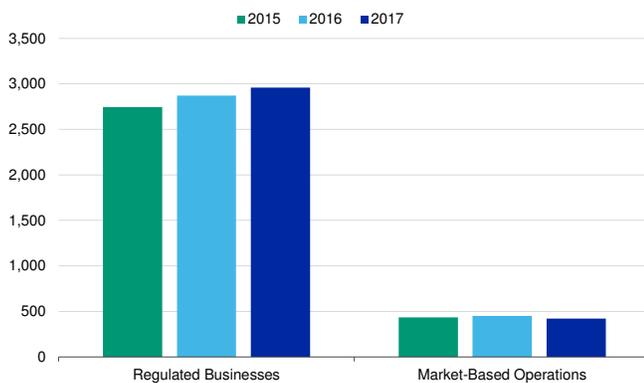

Market-Based businesses: Accounting for 12.5% of the company's revenue in 2017, this segment includes various businesses that provide market-based water and wastewater products and services. It operates through the following four business lines (which individually do not meet the criteria of a reportable segment):

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

- » **Contract Operations Group:** This business line designs, builds, operates and maintains water and wastewater facilities primarily for municipalities, the food and beverage industry, and other customers. Its key competitors include Veolia Environnement SA, Operations Management International, Inc. and Southwest Water Company.
- » **Homeowner Services Group:** This business line operates in partnership with various municipal authorities to protect households and small companies against the cost of interior and external water and sewer line repairs, and interior electric line repairs. Its key competitors include HomeServe USA and Pivotal Home Solutions. As of 31 December 2017, this business line maintained 1.7 million customer contracts in 43 US states and the District of Columbia and 10 LineSaver partnership agreements with municipalities and other organizations.
- » **Military Services Group:** This business line oversees the operation and maintenance of water and wastewater systems on various military bases under twelve 50-year contracts with the US Department of Defense, as of 31 December 2017. Its key competitors include American States Water Company, Suez North America, Veolia Environnement S.A., Inframark, LLC and Woodard & Curran.
- » **Keystone:** This business segment provides natural gas exploration and production companies with customized water sourcing, transfer services, pipeline construction, water and equipment hauling and water storage solutions. Its key competitors include Select Energy Services, Inc., TETRA Technologies, Inc. and Fluid Delivery Solutions, LLC.

Management strategy

Strategically, American Water seeks to:

- » Improve service quality and maximize customer satisfaction, while maintaining a balance between the company's infrastructure investment needs and customer costs. The company is implementing a three year plan to enhance technology and innovation for improving customer experience. It includes 1) leveraging artificial intelligence to improve customer service; 2) liaising with on-line customer communities to gain immediate input and reactions from customers before rolling out programs; (3) analyzing most frequent customer interactions and evolving the internal processes to meet customer demands.
- » Invest in safety measures for all employees, customers and the public. Most of the company's capital expenditure over the next few years will focus on lower-risk system improvements and the replacement of old infrastructure.
- » Create a workplace environment that supports diversity in the workforce and promote personal development through training and development plans
- » Undertake capital expenditure of \$8.0 billion–\$8.6 billion over the next five years (2018-22), including \$7.2 billion to improve infrastructure in its Regulated Businesses segment. The company also plans to spend \$600 million–\$1.2 billion on acquisitions in its Regulated Businesses segment and \$200 million which includes investments related to growth in its Market-Based Businesses segment.
- » Maximize operational efficiency, technological innovation and environmental stewardship. American Water targets an operation and maintenance (O&M) efficiency ratio³ that does not exceed 32.0% by 2022.

Furthermore, during 2018-22, the company aims to achieve adjusted earnings per share (EPS) compound annual growth of 7%–10%, anchored off of its 2016 EPS.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJJK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJJK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJJK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJJK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJJK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJJK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJJK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

American Water Works Company, Inc.

Key Facts and Statistics - FY Dec 2016

Company Overview

American Water Works Company, Inc. (American Water) is a New Jersey-based holding company whose subsidiaries provide water-related and wastewater-related services.

As of 31 December 2016, American Water operated in 47 US states, the District of Columbia and Canada, serving approximately 15 million people. In the financial year ended 31 December 2016 (2016), it reported revenue of USD3.3 billion.

American Water originated in 1886 with the establishment of American Water Works & Guarantee Company. In 1935, it was renamed American Water Works Company, Inc. In 1947, it became publicly traded on the New York Stock Exchange (NYSE). Over 2003–08, the company was privately owned, but was relisted on the NYSE in 2008 through an initial public offering (ticker: AWK). As of 31 December 2016, the company's largest shareholder was The Vanguard Group, which owned 9.58% of its total share capital.

Sources: Company reports (form 10-K Dec 2016 and Dec 2011), company data, Schedule 13G filings, Moody's Financial Metrics

Business Description

American Water is a holding company whose subsidiaries provide water-related and wastewater-related services to approximately 15 million people. It provides water and sewer line protection services to households and operates and maintains water and wastewater facilities for the US military, municipalities, and the food and beverage industry.

The company originated in 1886 with the establishment of American Water Works & Guarantee Company to build and acquire water systems in McKeesport, Pennsylvania. In 1935, it was renamed American Water, and in 1947 it became publicly traded on the NYSE. In 1965, to expand its operations, the company purchased water properties owned by Southern Gas & Water Company (West Virginia). In 1970, it consolidated 12 operating companies in New Jersey to create the New Jersey Water Company. In 2003, the company was acquired by the Germany-based stock corporation RWE Aktiengesellschaft (RWE). In April 2008, RWE Aqua Holdings GmbH, a wholly owned subsidiary of RWE (and at the time the sole owner of the company's common stock), divested part of its stake through an initial public offering on the NYSE. By 2009, RWE had disposed of its remaining interests through similar transactions.

Since 2012, American Water has divested its regulated businesses where regulatory jurisdictions were challenging, and instead acquired assets in areas where regulations have proved more supportive. In 2012, it sold all its water and wastewater companies in Arizona and New Mexico, as well as eight water systems and one wastewater system in Ohio. During that period, it acquired 10 regulated water and wastewater systems for USD44.6 million, including seven regulated water systems in New York. In 2013, the company's regulated businesses acquired 10 water systems and five wastewater systems (including the regulated wastewater utility company Dale Service Corporation in November 2013) for approximately USD23.7 million. In 2014, American Water completed 13 acquisitions of various regulated water and wastewater systems for a total purchase price of USD8.9 million. During the same year, the company exited its Class B biosolids¹ business (which provided biosolids management, transport and disposal services to municipal and industrial customers in Ontario, Canada) through the sale of its subsidiary Terratec Environmental Ltd.

In 2015, American Water bought a 95% stake in Water Solutions Holdings, LLC, the parent company of Keystone Clearwater Solutions, LLC, for USD133 million. During the same year, it purchased 14 regulated water and wastewater systems for USD64 million. Furthermore, in 2016, the company acquired 15 water and wastewater systems for USD199 million.

As of 31 December 2016, American Water operated mainly through the Regulated Businesses segment. The company also operates the Market-Based Businesses segment, which also includes four operating segments and provides extensive related and complementary water and wastewater services.

Regulated Businesses: Accounting for 86.4%² of the company's revenue in 2016, this segment operated through 18 utility subsidiaries, providing water and wastewater utility services to households, companies and public authorities in approximately 1,600 communities across 16 US states, as of 31 December 2016. It also provides water to private fire hydrants and other water utilities for resale. In 2016, this segment provided water services to 2.8 million residential customers (174.6 billion gallons of water), 220,000 commercial customers (82.5 billion gallons), 4,000 industrial customers (38.5 billion gallons) and 61,000 public and other customers (50.7 billion gallons). Additionally, in 2016, it delivered wastewater services to 171,000 residential customers and 10,000 commercial customers. As of 31 December 2016, it owned and operated 81 surface water and approximately 522 groundwater treatment plants, 1,022 groundwater wells, 121 wastewater treatment facilities, 1,284 treated water storage facilities, 1,433 pumping stations, 80 dams and 49,635 miles of water mains and collection pipes. Its key competitors include government agencies and publicly owned utilities such as Aqua America Inc., United Water, American States Water Company and California Water Services Group.

Market-Based Businesses: Accounting for 13.6% of the company's revenue in 2016, this segment includes various businesses that provide market-based water and wastewater products and services. It operates through the following four business lines (which individually do not meet the criteria of a reportable segment):

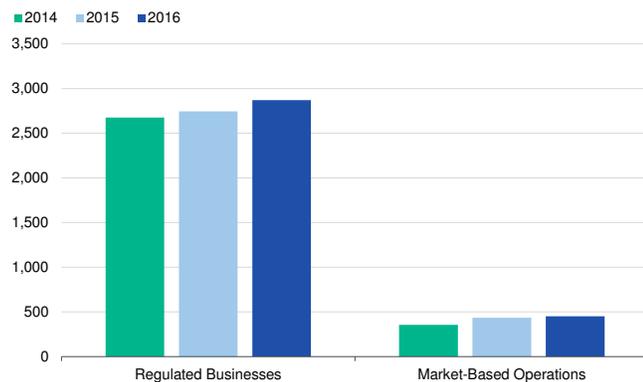

- » **Contract Operations Group:** This business line designs, builds, operates and maintains water and wastewater facilities primarily for municipalities, the food and beverage industry, and other customers. Its key competitors include Veolia Environnement SA, Operations Management International, Inc. and Southwest Water Company.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

- » **Homeowner Services Group:** This business line operates in partnership with various municipal authorities to protect households and small companies against the cost of interior and external water and sewer line repairs, and interior electric line repairs. Its key competitors include HomeServe USA, Pivotal Home Solutions and Dominion Energy Solutions. In 2014, the Homeowner Services Group expanded its water and sewer line protection programs in eight additional states. Furthermore, Orlando Utilities Commission appointed the business as the exclusive provider of its service line protection programs.
- » **Military Services Group:** This business line oversees the operation and maintenance of water and wastewater systems on various military bases under twelve 50-year contracts with the US Department of Defense, as of 31 December 2016. Its key competitors include American States Water Company.
- » **Keystone:** This business segment provides natural gas exploration and production companies with customized water sourcing, transfer services, pipeline construction, water and equipment hauling and water storage solutions. Its key competitors include Rockwater Energy Solutions, Rain for Rent and Fluid Delivery Solutions, LLC.

Management Strategy

Strategically, American Water seeks to:

- » Improve service quality and maximize customer satisfaction, while maintaining a balance between the company's infrastructure investment needs and customer costs
- » Create a workplace environment that supports diversity in the workforce and strengthens the company's relationships with union-represented employees
- » Undertake capital expenditure of USD6.7 billion–USD7.3 billion over the next five years, including USD5.9 billion to improve infrastructure in its Regulated Businesses segment. The company also plans to spend USD600 million–USD1.2 billion on acquisitions in its Regulated Businesses segment and USD200 million which includes investments related to growth in its Market-Based Businesses segment.
- » Invest in safety measures for all employees, customers and the public. Most of the company's capital expenditure over the next few years will focus on lower-risk system improvements and the replacement of old infrastructure.
- » Maximize operational efficiency, technological innovation and environmental stewardship. American Water targets an operation and maintenance (O&M) efficiency ratio³ that does not exceed 32.5% by 2021.

Furthermore, during 2017-21, the company aims to achieve earnings per share (EPS) compound annual growth of 7%–10%, anchored off of its 2015 EPS.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJJK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJJK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJJK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJJK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJJK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJJK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJJK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Research Update:

American Water Works Co. Inc. And Subsidiaries 'A' Ratings Affirmed; Outlooks Remain Stable

Overview

- We expect American Water Works Co. Inc. (AWK) to strategically maintain its regulated water and wastewater operations between 90%-95% of the company's consolidated EBITDA.
- In our view, AWK's business risk now reflects the higher half of the range of its business risk profile category when compared to peers incorporating the company's strategic commitment, its large and diversified customer base, and effective management of regulatory risk. This will offset marginally weaker financial measures.
- We are affirming our 'A' issuer credit rating on AWK and subsidiaries Pennsylvania-American Water Co. (PAW) and New Jersey-American Water Co. (NJAW). The outlook on all entities remains stable.
- The stable outlook on AWK and subsidiaries reflects our expectation that the company will continue to focus its strategic growth on its regulated water distribution operations, maintaining the regulated businesses between 90%-95% of EBITDA. In addition, we expect the company will continue to manage regulatory risk effectively, maintaining marginally weaker financial measures consistent with the lower end of its financial risk profile category.

Rating Action

On June 11, 2018, S&P Global Ratings affirmed its 'A' issuer credit ratings on American Water Works Co. Inc. (AWK) and subsidiaries Pennsylvania-American Water Co. (PAW) and New Jersey-American Water Co. (NJAW). The outlooks are stable.

We also affirmed the 'A' unsecured debt rating on American Water Capital Corp. (AWCC), 'A-1' short-term rating at AWCC and AWK, and A+' ratings on PAW's and NJAW's secured debt.

Rationale

The ratings affirmation reflects our expectations that the company's strong commitment to maintain its low-risk, regulated operations between 90%-95% of AWK's consolidated EBITDA offsets marginally weaker financial measures.

We assess AWK's business risk profile at the higher half of the range for its

business risk profile category, compared to peers. This reflects the company's monopolistic and lower-risk, regulated water distribution and wastewater business providing an essential service in regulatory jurisdictions that we generally view as supportive of credit quality. AWK's operations benefits from constructive mechanisms such as the distribution system investment charge (DSIC) and infrastructure replacement surcharges in a number of its jurisdictions, which allow for the recovery of high capital spending outside of a traditional rate-case proceeding and reduces regulatory lag. In addition, some of the key jurisdictions benefit from forward-looking test years and revenue stabilization mechanisms, which help the company to earn close to its allowed return on equity (ROE) year-over-year. The company's geographic diversity and solid operating efficiency further supports its business risk profile.

AWK, largest in size and diversity among all water companies in the U.S., serves approximately 3.4 million water and wastewater customers across 16 states, out of which New Jersey, Pennsylvania, and Illinois are largest by customer base and revenue contribution. New Jersey, Pennsylvania, and Illinois account for about 25%, 22%, and 10% of the company's revenues and customer base, respectively. AWK's water and wastewater operations are reliable, safe, and consistently comply with all necessary safety standards. The businesses also focus strongly on controlling expenses leading to O&M efficiency ratios in line with industry peers.

AWK's nonregulated businesses largely consist of its Homeowner Services Group and its Military Services Group. All other divisions (Contract Operations and Keystone Clearwater Solutions) contribute minimally to the nonregulated operations.

Over time, the company has streamlined its nonregulated operations and improved its competitiveness. In general, AWK's nonregulated businesses are diversified, affiliated to regulated service jurisdictions, have modest capital spending requirements, and are stable cash flow contributors. The Homeowner Services business (the largest among the nonregulated operations) runs a home warranty business offering water and sewer protection contracts to homeowners. Although the business is subject to competition, there is low customer turnover largely because the charges are part of utility water bills for a significant number of customers, which has helped retain customers. The company recently acquired Pivotal Home Solutions (Pivotal) for \$363.7 million. The acquisition of Pivotal, in addition to increasing the number of contracts for Homeowner Services Group, also diversifies company's exposure by introducing new type of contracts (gas line, plumbing, heating, ventilation, and air conditioning, etc.). The Military Services business, the second-largest component of nonregulated operations, shares several utility-like risk characteristics. The business has similar operations profile featuring long-term contract lengths (50 years) with U.S. military bases with contract prices that cover operation and maintenance (O&M) costs, capital program and system expansion costs. These factors, collectively, somewhat reduce our perception of risk associated with AWK's nonregulated businesses. On a forward-looking basis, we expect that the EBITDA contribution from

nonregulated operations will not deviate materially from its current contribution (about 8% of consolidated AWK's EBITDA).

We assess AWK's financial risk profile using our most relaxed financial ratio benchmarks compared to those used for a typical corporate issuer, reflecting the company's low-risk, regulated water distribution operations and its overall effective management of regulatory risk. Under our base-case scenario, we expect AWK's consolidated financial measures to weaken over the next couple of years primarily due to the tax reform, loss of bonus depreciation, and higher capital spending. Specifically for 2018, our base case assumes single-digit EBITDA growth, \$1.9 billion of capital spending, \$320 million of dividends, and consistent regulatory recoveries through rate cases and use of cash smoothing mechanisms. We expect funds from operations (FFO) to total debt to be at the lower end of the range for the company's current financial risk profile category, at about 13%-14% over next three years. Previously, FFO to debt was about 17%. The weaker financial measures are indicative of minimal cushion at its current rating level and is consistent with our assessment of the comparable rating analysis modifier as negative.

Liquidity

AWK has adequate liquidity and can more than cover its needs for the next 12 months, even if EBITDA declines by 10%. We expect the company's liquidity sources over the next 12 months will exceed uses by more than 1.1x. AWK's liquidity benefits from the company's ability to absorb a high-impact, low-probability event with limited need for refinancing, well-established relationships with banks, a satisfactory standing in the credit markets, and manageable debt maturities over the next few years.

Principal liquidity sources:

- FFO of \$1.3 billion;
- Committed equity issuance proceeds of about \$183.3 million; and;
- Assumed credit facility availability of about \$2.2 billion.

Principal liquidity uses:

- Debt maturities, including outstanding short-term debt of about \$1.2 billion;
- Maintenance capital spending of about \$1 billion;
- Cash dividends of about \$320 million; and
- Committed acquisitions of about \$363 million.

Other Credit Considerations

We assess the comparative rating analysis modifier as negative, reflecting financial measures that we expect to weaken and remain at the lower end of the company's current financial risk profile category.

Group Influence

We assess AWK as the parent of a group that includes New Jersey American Water Co., Pennsylvania American Water Co., and American Water Capital Corp. (AWCC). As a result, AWK's stand-alone credit profile of 'a' becomes the group credit profile, leading to our 'A' issuer credit rating on AWK.

Outlook

The stable outlook on AWK and subsidiaries reflects our expectation that the company will continue to focus its strategic growth on its regulated water distribution operations, maintaining the regulated businesses between 90%-95% of consolidated EBITDA. In addition, we expect the company will continue to manage regulatory risk effectively, maintaining financial measures at the lower end of its financial risk profile category. Under our base-case scenario forecast, we expect annual adjusted FFO to debt averaging around 13%-14%.

Downside scenario

We could lower the ratings on AWK and subsidiaries if the nonregulated operations increased such that they consistently contribute disproportionately to the consolidated EBITDA or the nonregulated operations become riskier than our current assessment. In addition, deteriorating management of regulatory risk or financial measures lower than our base-case expectations, specifically FFO to debt consistently below 13% could also lead to lower ratings.

Upside scenario

We could raise the ratings if adjusted FFO to debt consistently remains over 16%. This could occur if the company consistently managed its regulatory risk and achieved higher-than-expected rate-case outcomes, along with continued prudently managed expenses and use of lower debt and more equity to fund capital expenditures and acquisitions.

Ratings Score Snapshot

- Capital structure: Neutral (no impact)
- Financial policy: Neutral (no impact)
- Liquidity: Adequate (no impact)
- Management and governance: Satisfactory (no impact)
- Comparable rating analysis: Negative (-1 notch)

Stand-alone credit profile: a

- Group credit profile: a

Issue Ratings--Subordination Risk Analysis

We base our 'A-1' short-term rating on AWCC and AWK on the companies' respective issuer credit rating.

Capital structure

AWK's capital structure consists of about \$6.8 billion of debt, out of which about \$5.4 billion is issued at AWCC and about \$1.3 billion is issued at operating subsidiaries.

Analytical conclusions

The senior unsecured debt at AWK's finance entity, AWCC, is rated the same as the issuer credit rating because subsidiary debt does not exceed 50% of AWK's consolidated debt after which point AWCC's debt could be considered structurally subordinated.

Summary:

American Water Works Co. Inc.

Rationale

| Business Risk: Excellent | Financial Risk: Intermediate |
|---|--|
| <ul style="list-style-type: none"> • A low-risk, rate-regulated water utility; • Geographic and regulatory diversity; and • Effective management of regulatory risk. | <ul style="list-style-type: none"> • Use of the low volatility table based on the company's low-risk, rate-regulated water utilities and effective management of regulatory risk; • Core financial measures that are consistent with the intermediate financial risk profile category; • Large capital spending program; and • Expectation of stable cash flows. |

Outlook: Stable

The stable rating outlook on American Water Works Co. Inc. (AWK) reflects S&P Global Ratings' expectation that the company will continue to effectively manage its regulatory risk while maintaining financial measures that remain consistently within the intermediate financial risk profile category. Under our baseline forecast, we expect funds from operations (FFO) to debt of more than 17%-19%.

Downside scenario

We could lower the ratings on AWK if regulatory risk increased or performance stalled or deteriorated, which could result from substantial debt financing of capital spending or acquisitions, such that FFO to debt fell to less than 15%.

Upside scenario

We could raise the ratings if FFO to total debt consistently remained over 20%. This could take place if the company managed its regulatory risk and achieved higher than expected rate case outcomes, along with continuing to prudently manage expenses.

S&P Global Ratings' Base-Case Scenario

| Assumptions | Key Metrics | | | |
|--|-----------------------|--------------|--------------|--------------|
| <ul style="list-style-type: none"> Continued effective management of regulatory risk; Capital spending of about \$1.2 billion; Dividends to grow roughly 5%; Negative discretionary cash primarily due to higher capital spending; and Refinancing of upcoming debt maturities. | | 2015A | 2016E | 2017E |
| | FFO/total debt (%) | 17.3 | 16-18 | 16-18 |
| | Total debt/EBITDA (x) | 4.5 | 4.3-4.8 | 4.3-4.8 |
| A--Actual. E--Estimated. FFO--Funds from operations. | | | | |

Business Risk: Excellent

We view AWK's business risk as excellent, based on its monopolistic and lower-risk, rate-regulated water distribution business that provides an essential service in regulatory jurisdictions, which we generally view as supportive of credit quality. In addition, the company's geographic diversity, reliability, and efficiency further support its business risk profile. AWK's elevated capital spending requirements for infrastructure replacement, increased compliance costs to meet water quality standards, and reliance on acquisitions to provide growth partly offset these strengths. The company serves approximately 3.2 million water and wastewater customers across 16 states. Based on EBITDA, we consider AWK's operations about 95% regulated and 5% unregulated. Although we view the unregulated businesses as having higher business risk compared with the regulated operations, we also recognize AWK's unregulated businesses marginally affect the company's business risk profile because of its modest expected capital requirements, affiliation

with its regulated service jurisdictions, and lower-risk service contracts.

AWK is regulated by the public utility commissions of the states in which they operate namely New Jersey, Pennsylvania, Illinois, Missouri, Indiana, California, and West Virginia, which represent approximately 87% of revenues and 85% of customers. The company benefits from constructive mechanisms such as the distribution system investment charge (DSIC) in a number of its jurisdictions, which allows for the recovery of high capital spending outside of a traditional rate-case proceeding and reduces regulatory lag.

Financial Risk: Intermediate

We assess AWK's financial risk profile as intermediate based on our low volatility benchmark ratios, reflecting the company's lower-risk, rate-regulated water business model and its above-average management of regulatory risk. Under our base-case scenario, we expect FFO to debt to be about 17%, which is consistent with the intermediate category. We also expect AWK will continue to have negative discretionary cash flow, reflecting its higher capital spending level. Fundamentally, we expect AWK will continue to fund its investments in a manner that preserves credit quality.

The combination of the excellent business and intermediate financial risk profiles leads to a choice of 'a+'/'a' anchor, we choose the 'a' anchor, which captures the relatively higher risk associated with the company's non-utility businesses as compared to regulated utility operations.

Liquidity: Adequate

Our short-term rating on AWK is 'A-1'. We assess AWK's liquidity as adequate because we believe its liquidity sources are likely to cover uses by more than 1.1x over the next 12 months and meet cash outflows even with a 10% EBITDA reduction. The adequate assessment also reflects the company's generally prudent risk management, sound relationships with banks, and a generally satisfactory standing in credit markets.

| Principal Liquidity Sources | Principal Liquidity Uses |
|--|--|
| <ul style="list-style-type: none"> • Credit facility availability of at least \$1.25 billion for the 12 months ending March 31, 2017; and • FFO of about \$1.3 billion over for the 12 months ending March 31, 2017. | <ul style="list-style-type: none"> • Debt maturities of about \$680 million, including outstanding short-term debt, for the 12 months ending March 31, 2017; • Capital spending of about \$1.3 billion for the 12 months ending March 31, 2017; and • Dividends of roughly \$275 million for the 12 months ending March 31, 2017. |

Other Credit Considerations

Our assessment of modifiers results in no further changes to the anchor score.

Group Influence

Under our group rating methodology, we view AWK as the parent of a group whose members are American Water Capital Corp., New Jersey American Water Co, and Pennsylvania American Water Co. AWK's group credit profile is 'a', leading to an issuer credit rating of 'A'.

Recovery Analysis

Key Analytical Factors

We assign recovery ratings to first-mortgage bonds (FMBs) issued by U.S. utilities, which can result in issue ratings being notched above a corporate credit rating on a utility depending on the rating category and the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of "secured utility bond" (SUB) that qualify for a recovery rating as defined in our criteria (see "Collateral Coverage and Issue Notching Rules for '1+' and '1' Recovery Ratings on Senior Bonds Secured by Utility Real Property, Feb. 14, 2013). The recovery methodology is supported by the ample historical record of 100% recovery for secured bondholders in utility bankruptcies in the U.S. and our view that the factors that enhanced those recoveries (limited size of the creditor class and the durable value of utility rate-based assets during and after a reorganization given the essential service provided and the high replacement cost) will persist in the future.

Under our SUB criteria, we calculate a ratio of our estimate of the value of the collateral pledged to bondholders relative to the amount of FMBs outstanding. FMB ratings can exceed a corporate credit rating on a utility by up to one notch in the 'A' category, two notches in the 'BBB' category, and three notches in speculative-grade categories, depending on the calculated ratio.

New Jersey American Water and Pennsylvania American Water's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating one notch above the corporate credit rating.

American Water Capital Corp.'s senior unsecured debt is rated the same as the company's issuer credit rating because priority obligations are less than 20% of the total assets of American Water Works.

- 49.** Provide KAWC's monthly cost and amounts of short-term debt from 2010 through 2018. Provide all supporting documentation analyses, work papers, and spreadsheets with cell formulas intact.

Response:

Please see KAW_R_AGDR1_NUM049_012519_Attachment.

Regarding the short-term interest rate, KAWC's short-term borrowing is through a line of credit agreement with American Water Capital Corp. ("AWCC"). The rate is based on the one-month LIBOR rate, and is determined by the market at the time AWCC issues its securities. The rate passed through to KAWC is a weighted average of the rates on all notes that AWCC has outstanding in a given month.

CASE NO. 2018-00358
ATTORNEY GENERAL'S FIRST REQUEST FOR INFORMATION

Witness: Scott W. Rungren

- 54.** Provide all data and supporting workpapers for KAWC's requested cost of short-term debt. If the cost of short-term debt includes commitment fees or other fees over and above the pure cost of short-term debt, separate out such additional fees.

Response:

The Excel file containing the requested work papers was filed in response to PSC 1-1.

The file name is "KAWC_2018_Rate Case_-_Capital Structure.xlsx". Within that file, see tab "Sch J WPs", Excel row 448, in columns S to AF.

The projected monthly short-term rates used to compute the thirteen-month average rate in the above-referenced file are projected one-month LIBOR (London Interbank Offered Rate) rates taken from Bloomberg on October 5, 2018, with the addition of a spread of 0.19.

The spread was calculated by the subtracting the actual spot commercial paper rate on October 5, 2018, which was 2.28 percent, from the average one-month commercial paper rate for American Water on October 5, 2018, which was 2.47 percent. The difference of 0.19 was used as the projected spread to add to the projected one-month LIBOR rates from Bloomberg to arrive at the projected American Water short-term rates.
